

Syllabi
for
The Bachelor of
Maritime Transport and Nautical Science
(The Master Mariner Training Programme)

Version 5.80, 1 February 2021

Overview of syllabi:

No.	Subject area	BS1	BS2	BS3	BS4	BS5	BS6	BS7	BS8
11000	Workshop Training, Safety and Seamanship (BS)	X							
12000	Work Experience (BS)		X			X	X		
13000	Interdisciplinary Elements (BS)			x	x			X	
14000	Nautic (BS)	x		x	x	x			X
15000	Technology (BS)	x		x	x			X	
16000	Management (BS)			x	x	x		X	
18000	Elective Subject (BS)							X	
19000	Bachelor Project (BS)								x

Subject area:	11000	Workshop Training, Safety at Sea and Seamanship (BS)		
Subject(s):	14100	Navigation (4 ECTS)		
	14110	Navigation I	BS1	4 ECTS
	14300	Watch Keeping (2 ECTS)		
	14310	Watch keeping Duty I	BS1	2 ECTS
	15100	Ship Technology (5 ECTS)		
	15110	Practical Sailing	BS1	3 ECTS
	15120	Ship Technology I	BS1	2 ECTS
	15125	Basic Training for Oil, Chemical & Gas Tanker		
	15200	Maritime Technology (5 ECTS)		
	15210	Maintenance	BS1	1 ECTS
	15220	Environment	BS1	1 ECTS
	15250	Motor Operation	BS1	3 ECTS
	11100	Safety Training (6 ECTS)		
	11110	Safety at Sea	BS1	1 ECTS
	11120	Safety at Work	BS1	1 ECTS
	11130	Safety at Work - Paragraph 17		
	11140	Elementary First Aid	BS1	1 ECTS
	11161	Basic Fire Fighting Theory	BS1	1 ECTS
	11162	Basic Fire Fighting Course		
	11171	Advanced Fire Fighting Theory	BS4	1 ECTS
	11172	Advanced Fire Fighting Course		
	11180	Maritime Law	BS1	1 ECTS
	11190	Designated Security Duties		
	11200	Workshop Training (8 ECTS)		
	11210	Vice Work and Technical Documentation	BS1	2 ECTS
	11211	Welding and Material Understanding	BS1	1 ECTS
	11212	Electrical and Electronic Machinery and Systems	BS1	2 ECTS
11213	Hydraulic	BS1	1 ECTS	
11280	Rigging Workshop	BS1	2 ECTS	

Admission criteria:	None for subject area Workshop Training, Safety and Seamanship (BS).
Criteria to pass subject	<p>These assessments make up the subject:</p> <ol style="list-style-type: none"> 1. None assessments using the 7-point grade scale. <ul style="list-style-type: none"> • To pass the average of the assessments must be at least 2.0 (no rounding) 2. Fifteen assessments graded Passed/Not Passed. <ul style="list-style-type: none"> • All assessments must be graded Passed.
Semester:	BS1
ECTS credits:	30
Course Regulations:	<ul style="list-style-type: none"> • Master Mariner (BS) version 5.80, 1 February 2021.
Orders:	<ul style="list-style-type: none"> • Order on the professional bachelor training programme for Master – Danish order no. 1611 of 13 December 2016, as amended. • Order on the professional bachelor training programme for Master - Danish order no. 1349 of 23 November 2018 as amended. This order is for students who were registered in BS1 for first time in the spring of 2019 or later (2019-2, 2020-1 ect.). • Order on tests in the maritime programmes – Danish order no. 1585 of 13 December 2016, as amended. • Order on grading scale and other examination – Danish order no 114 of 3 February 2015, as amended. • Order on certificate of proficiency tests et cetera – Danish order no 184 26 March 1999, as amended. • Order on training programme and refresher training programme for safety at sea and firefighting on board ships – Danish order no 226 of 2 March 2015, as amended. • Order on training programme for Tanker Operations – Danish order no 1165 2 November 2014, as amended. • Order on training programme for operation of survival craft and rescue boat other than fast rescue boats – Danish order no 1207 23 October 2015, as amended. • Order on training programme and refresher training programme for operation of fast rescue boats – Danish order no 658 12 May 2015, as amended. • Order on training programme in Maritime Security of Ships – Danish order no 1279 of 7 November 2013, as amended. • Order on training programme and refresher training programme for advanced firefighting on board ships – Danish order no 1466 of 8 December 2015, as amended. • Order on measures for prevention of cancer risk by working with substances and materials (§17 course) – Danish order no 1795 of 18 December 2016, as amended.
STCW:	<p><u>STCW Code, as amended: Part A, chapter II - Master and deck department:</u> Section A-II/1 – Operational level</p> <p><u>STCW Code, as amended: Part A, chapter VI - Emergency, safety, security:</u> Section A-VI/1, paragraph 2</p> <ul style="list-style-type: none"> • Personal survival techniques as set in table A-VI/1-1 • Fire prevention and fire-fighting as set in table A-VI/1-2 • Elementary first aid as set in table A-VI/1-3

	<ul style="list-style-type: none"> • Personal safety and social responsibilities as set in table A-VI/1-4 <p>Section A-VI/2, paragraph 1 to 12</p> <ul style="list-style-type: none"> • Proficiency in survival craft and rescue boats other than fast rescue boats as set in table A-VI/2-1. • Proficiency in fast rescue boats as set in table A-VI/2-2 <p>Section A-VI/2-2, paragraph 7 to 12</p> <ul style="list-style-type: none"> • Proficiency in fast rescue boats as set in table A-VI/2-2. <p>Section A-VI/3, paragraph 1 to 6</p> <ul style="list-style-type: none"> • Advanced fire-fighting as set in table A-VI/3 <p>Section A-VI/4, paragraph 1 to 3</p> <ul style="list-style-type: none"> • Medical first aid as set in table A-VI/4-1 <p>Section A-VI/6, paragraph 6 to 8</p> <ul style="list-style-type: none"> • Designated Security Duties as set in tablet A-VI/6-2 <p><u>STCW Code, as amended: Part A, chapter V - Special training requirements:</u></p> <p>Section A-V/1-1-1</p> <ul style="list-style-type: none"> • Basic training for oil and chemical tanker as set in table A-V/1-1-1. <p>Section A-V/1-2-1</p> <ul style="list-style-type: none"> • Basic training for gas tanker as set in table A-V/1-2-1
<p>Certificate(s):</p>	<p><u>Certificate of Proficiency Basic Safety Training</u> is issued upon completion of the training programme prescribed in Regulation VI/1 and STCW Code; section A-VI/2 of the STCW Convention of 1978, as amended.</p> <p><u>Certificate of Proficiency in Medical First Aid</u> is issued upon completion of the training programme prescribed in Regulation VI/4, paragraph 1 of the STCW Convention of 1978, as amended.</p> <p><u>Certificate of Proficiency in Motor Operation</u> is issued upon completion of the training programme prescribed in the Danish order no 184 of 26 March 1999 as amended.</p> <p>The person concerned must have</p> <ol style="list-style-type: none"> 1. passed the proficiency test in motor operation and 2. completed 6 months' seagoing deck and/or engine duty in ships with a propulsion power of or above 100 kW. <p><i>The proficiency test in motor operation</i> is passed when the student has passed following subjects:</p> <ol style="list-style-type: none"> 1. Motor Operation – subject no 15250. 2. Environment – subject no 15220. 3. Electrical and Electronic Machinery and Systems – subject no 11212 <p><u>Certificate of Proficiency for Designated Security Duties</u> is issued upon completion of the specialized training programme prescribed in Regulation VI/6, paragraph 4 to 6 of the STCW Convention of 1978, as amended and the Danish order no 1279 of 7 November 2013, as amended.</p> <p><u>Course Certificate of Basic Training for Oil, Chemical and Gas Tanker Cargo Operations</u> is issued upon completion of the training programme prescribed in Regulation V/1-1, paragraph 2.2 and Regulation V/1-2, paragraph 2.2 of the STCW Convention of 1978, as amended and the Danish order no 1165 2 November 2014, as amended. ("Carry out fire-fighting operations" as set in table A-V/1-1-1 and 1-2-1 of STCW Convention of 1978, as amended)</p>

	<p><u>Course Certificate of Safety and Health Training in Welding and Thermal Cutting</u> is issued upon completion of the training programme prescribed in the Danish order no. 1795 of 18 December 2015, as amended - (paragraph 17 training programme).</p> <p><u>Certificate of Proficiency in Advanced Fire Fighting on board Ships</u> is issued upon completion of the training programme prescribed in Regulation VI/3 of the STCW Convention of 1978, as amended and the Danish order no 1466 of 8 December 2015, as amended.</p> <p><u>Course Certificate in survival craft and rescue boat other than fast rescue boats</u> is issued upon completion of the training programme prescribed in Regulation VI/2, paragraph 1.3 of the STCW Convention of 1978, as amended and the Danish order no 1207 23 October 2015, as amended.</p> <p><u>Certificate of Proficiency in survival craft and rescue boat other than fast rescue boats</u> is issued upon completion of at least 6 months relevant seagoing service is proved and completed the training programme prescribed in Regulation VI/2, paragraph 1 of the STCW Convention of 1978, as amended and the Danish order no 1207 23 October 2015, as amended.</p> <p><u>Course Certificate in Fast Rescue Boats</u> is issued upon completion of the training programme prescribed in Regulation VI/2, paragraph 2.3 of the STCW Convention of 1978, as amended and the Danish order no 658 12 May 2015, as amended.</p> <p><u>Certificate of Proficiency in Fast Rescue Boats</u> is issued when a holder of Certificate of Proficiency in survival craft and rescue boat other than fast rescue boats has completed the training programme prescribed in Regulation VI/2, paragraph 2 of the STCW Convention of 1978, as amended and the Danish order no 658 12 May 2015, as amended.</p>
Responsible:	Subject Manager
Valid from:	2020-2 VTA
Expired:	
Remarks:	None

Purpose

During the semester, the students must acquire the necessary knowledge, skills and qualifications to work on a merchant vessel as an apprentice in consideration of the ship, its crew and the environment.

Learning objectives

During this course, the students will be presented with various oral and written assignments, the purpose of which is to enhance their knowledge and understanding of technical and maritime English.

Navigation

Navigation I - BS1 (14110):

- For further information, see Nautical Syllabus (BS).

Watchkeeping

Watch keeping Duty I - BS1 (14310):

- For further information, see Nautical Syllabus (BS).

Ship Technology

Practical sailing - BS1 (15110):

- For further information, see Technology Syllabus (BS).

Ship Technology I - BS1 (15120):

- For further information, see Technology Syllabus (BS).

Basic Training for Oil, Chemical & Gas Tanker - BS1 (15125):

- For further information, see Technology Syllabus (BS).

Maritime Technology

Maintenance - BS1 (15210):

- For further information, see Technology Syllabus (BS).

Environment - BS1 (15220):

- For further information, see Technology Syllabus (BS).

Motor Operation - BS1 (15250):

- For further information, see Technology Syllabus (BS).

Safety Training

Safety at Sea - BS1 (11110):

The student must attain **knowledge** of:

- Construction and outfit of survival craft, fast rescue boat and rescue boats, individual items of their equipment and characteristics.
- Methods of, and safety precautions of launching survival craft, fast rescue boat and rescue boat including in rough seas
- Methods of recovering survival craft, fast rescue boat and rescue boats
- Dangers associated with on-load release devices
- Maintenance procedures in relation to boats, launching- and recovery gear.
- Operating winch, brakes, falls, painters and other equipment commonly fitted
- The precautions, in the case of "man overboard" and "fire" or "lifeboat" alarm.
- General sea survival requirements, the practical use of personal survival equipment and group survival equipment available on board.

The student must attain the **skills** necessary to:

- Right an inverted life raft while wearing a lifejacket or survival suit
- Prepare and safely launch survival craft and fast rescue boat using both on-load and off-load release devices
- Safely recover survival craft, fast rescue boat and rescue boats, including proper resetting of both on-load and off-load release devices
- Understand and use the necessary orders and tasks in English for safe evacuation
- Right a capsized fast rescue boat
- Handle a fast rescue boat in prevailing and adverse weather and sea conditions

The student must acquire the necessary **competencies** to:

- Take charge of a survival craft, fast rescue boat or rescue boat during and after a launch.
- Manage survival craft after abandoning ship.
- Use appropriate GMDSS equipment including signaling apparatus and pyrotechnics.
- Operate the engine of survival craft, fast rescue boat and rescue boats.
- Distinguish between the alarm signals used in commercial vessels, and explain the structure and use of a merchant ship safety plan and be able to demonstrate proper behavior according to the ships muster list.
- Use and understand the rescue means available on board properly and enter water from a certain height
- Stay fluent without buoyancy

Safety at Work - BS1 (11120):

The student must attain **knowledge** of:

- Safety management systems – namely the concepts of safety board, designated person ashore, and near miss.
- The content of the § 17 course.

The student must attain the **skills** necessary to:

- Job related safety assessments and application of personal protective equipment.
- Understand and use rest periods at sea.

The student must acquire the necessary **competencies** to:

- Show a good and responsible attitude in relation to own and others safety.
- Choose the correct personal protective equipment based on the contents of the workplace instructions.

Elementary First Aid - BS1 (11140):

The student must attain **knowledge** of:

- Assessment of needs of casualties and threats to own safety
- Appreciation of body structure and functions
- Understanding immediate measures to be taken in cases of emergency, including the ability to:
 - Position casualty
 - Apply resuscitation techniques
 - Control bleeding
 - Apply appropriate measures of basic shock management
 - Apply appropriate measures in event of burns scalds, including accidents caused by electric current
 - Rescue and transport a casualty
 - Improvise bandages and use materials in the emergency kit
- Body structure and function
- Fractures, dislocations and muscular injuries
- Spinal injuries
- Mental first aid
- Cardiac arrest, drowning and asphyxia

The student must attain the **skills** necessary to:

- None

The student must acquire the necessary **competencies** to:

- Take immediate action upon encountering an accident or other medical emergency

Basic Fire Fighting Theory - BS1 (11161):

The student must attain **knowledge** of:

- Shipboard fire-fighting organization
- Fire and smoke detection and automatic alarm systems
- The need for constant vigilance

The student must attain the **skills** necessary to:

- None

The student must acquire the necessary **competencies** to:

- Minimize the risk of fire and maintain a state of readiness to respond to emergency situations involving fire.

Basic Fire Fighting Course - BS1 (11162):

The student must attain **knowledge** of:

- Flammable materials, fire hazards and spread of fire
- Location of firefighting appliances and emergency escape routes
- Types and sources of ignition
- The elements of fire and explosion (the fire triangle)

- Actions to be taken on board ship
- Classification of fire and applicable extinguishing agents
- Fire-fighting equipment and its location on board
- Instruction in:
 - Fixed installations
 - Fire-fighter's outfits
 - Personal equipment
 - Fire-fighting appliances and equipment
 - Fire-fighting methods
 - Fire-fighting agents
 - Fire-fighting procedures
 - Use of breathing apparatus for fighting fires and effecting rescues

The student must attain the **skills** necessary to:

- None

The student must acquire the necessary **competencies** to:

- Fight and extinguish fire

Advanced Fire Fighting Theory – BS4 (11171):

The student must attain **knowledge** of:

- Ventilation control, including smoke extraction
- Control of fuel and electrical systems
- Fire-fighting process hazards (dry distillation, chemical reactions, boiler uptake fires, etc.)
- Fire-fighting involving dangerous goods
- Fire precautions and hazards associated with the storage and handling of materials (paints, etc.)

The student must attain the **skills** necessary to:

- Requirements for statutory and classification surveys
- Assessment of cause of incidents involving fire

The student must acquire the necessary competencies to:

- Inspect and service fire-detection and fire-extinguishing systems and equipment
- Investigate and compile reports on incidents involving fire

Advanced Fire Fighting Course – BS4 (11172):

The student must attain **knowledge** of:

- Firefighting procedures at sea and in port with particular emphasis on organization, tactics and command
- Use of water for fire extinguishing, the effect on ship stability, precautions and corrective procedures
- Communication and coordination during fire-fighting operations
- Management and control of injured persons
- Procedures for coordination with shore-based fire fighters

The student must attain the **skills** necessary to:

- Preparation of contingency plans
- Composition and allocation of personnel to fire parties
- Strategies and tactics for control of fires in various parts of the ship

- Fire-detection systems; fixed fire-extinguishing systems; portable and mobile fire-extinguishing equipment, including appliances, pumps and rescue, salvage, life-support, personal protective and communication equipment

The student must acquire the necessary **competencies** to:

- Control fire-fighting operations aboard ships
- Organize and train fire parties

Maritime Law - BS1 (11180):

The student must attain knowledge of his rights and obligations according to The Seamen's Act.

Designated Security Duties (DSD) - BS1 (11190):

The student must attain **knowledge** of:

- Knowledge of current security threats and patterns;
- Recognition, on a non-discriminatory basis, of characteristics and behavioral patterns of persons who are likely to threaten security;
- Techniques used to circumvent security measures;
- Security related communications;
- Knowledge of emergency procedures and contingency plans;

The student must attain the **skills** necessary to:

- Recognize and detect weapons, dangerous substances and devices.
- Manage crowds and crowd control techniques.
- Test, calibrate and at-sea maintenance of security equipment and systems.
- Inspect, control, and monitoring techniques.
- Operate security equipment and systems.

The student must attain the **competencies** required to:

- Physically search persons, personal effects, and baggage, cargo, and ship stores.

Workshop Training

Vice Work & Technical Documentation - BS1 (11210):

The student must attain **knowledge** of:

- Safety when working with rotating tools.

The student must attain the **skills** necessary to:

- Plan smaller tasks.
- Have a basic knowledge of various hand tools used on a merchant vessel.

The student must acquire the necessary **competencies** to:

- Performing simple tasks on equipment commonly found on merchant vessels.
- Interpret mechanical engineering drawings and produce simple production and installation drawings.

Welding & Material Understanding - BS1 (11211):

The student must attain **knowledge** of:

- Welding systems and equipment in order to use it safely and correctly.

The student must attain the **skills** necessary to:

- Perform simple welding tasks using MMA.
- Perform cutting using oxygen and gas.
- Assessing the quality of the crafts manship of the work performed.

The student must acquire the necessary **competencies** to:

- Conduct workplace layout when performing welding and/or cutting.

Electrical and Electronic Machinery and Systems - BS1 (11212):

The student must attain **knowledge** of:

- The basic principles underpinning ship power supply and automation systems, including generators, system design and users.
- Electrical systems on vessels.
- Construction of electro-technical documentation.
- 12/24 volt systems, UPS and emergency supply (Emergency board/EG).

The student must attain the **skills** necessary to:

- Assess common simple circuits.

The student must acquire the necessary **competencies** to:

- None

Hydraulics - BS1 (11213):

The student must attain **knowledge** of:

- Simple hydraulic plant construction and operation, and be familiar with the safety requirements for hydraulic and pneumatic power systems.
- Cleanliness requirements for hydraulic and pneumatic power systems.

The student must attain the **skills** necessary to:

- Identify common standard components of hydraulic systems, and assess their condition in relation to the operation, maintenance and safety.

The student must acquire the necessary **competencies** to:

- None

Rigging Workshop - BS1 (11280):

The student must attain **knowledge** of:

- Technical maritime vocabulary in Danish and English.
- Methods for securing various cargoes safely.
- Safety measures when operating cranes and lashing equipment, including Mean Break Load and Maximum Securing Load on ropes, wires and chains.

The student must attain the **skills** necessary to:

- Apply practical seamanship, knots, splices and bends.
- Perform start-up and safe operation of a standard hydraulic ship crane, using the correct communication signs.
- Perform practical use of simple mooring equipment and arrangement.

The student must acquire necessary **competencies** to:

- Secure various cargos safely By performing practical seamanship

- Perform the knots and hitches that are appropriate in a given normal working situation and explain the advantages and disadvantages of the various knots and hitches used.

Core literature

- Ship Knowledge - Dokmar Maritime Publishers B.V.
- Collision Avoidance Rules - Butterworth-Heinemann
- Søfartens ABC - Iver C. Weilbach
- Sjøvejsregler - Iver C. Weilbach
- Navigation 1 - Iver C. Weilbach
- Navigation 2 - Iver C. Weilbach

Note: All books must be the latest edition.

Examination

Safety at Sea - BS1 (11110):

Examination type:	Ongoing assessment
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	None
Prerequisites for examination:	None

Safety at Work - BS1 (11120):

Examination type:	Ongoing assessment
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	None
Prerequisites for examination:	None

Safety at Work – Paragraph 16 - BS1 (11130):

Examination type:	Ongoing assessment
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	None

Prerequisites for examination: None

Elementary First Aid - BS1 (11140):

Examination type: Ongoing assessment
Grade scale: Passed or Not Passed
Preparation time: None
Duration: N/A
Aids allowed: N/A
Important Information: None
Prerequisites for examination: None

Basic Fire Fighting Theory - BS1 (11161):

Examination type: Ongoing assessment
Grade scale: Passed or Not Passed
Preparation time: None
Duration: N/A
Aids allowed: N/A
Important Information: None
Prerequisites for examination: None

Basic Fire Fighting Course - BS1 (11162):

Examination type: Ongoing assessment
Grade scale: Passed or Not Passed
Preparation time: None
Duration: N/A
Aids allowed: N/A
Important Information: On the first day of the course, the student must bring a valid seafarer's health certificate or general certificate of health.

Prerequisites for examination: None

Advanced Fire Fighting Theory – BS4 (11171):

Examination type: Ongoing assessment
Grade scale: Passed or Not Passed
Preparation time: None
Duration: N/A
Aids allowed: N/A
Important Information: None
Prerequisites for examination: None

Advanced Fire Fighting Course – BS4 (11172):

Examination type: Ongoing assessment
Grade scale: Passed or Not Passed
Preparation time: None
Duration: N/A
Aids allowed: N/A
Important Information: None
Prerequisites for examination: None

Maritime Law - BS1 (11180):

Examination type: Ongoing assessment
Grade scale: Passed or Not Passed
Preparation time: None
Duration: N/A
Aids allowed: N/A
Important Information: None
Prerequisites for examination: None

Designated Security Duties - BS1 (11190):

Examination type: Ongoing assessment
Grade scale: Passed or Not Passed
Preparation time: None
Duration: N/A
Aids allowed: N/A
Important Information: None
Prerequisites for examination: None

Vice Work and Technical Documentation - BS1 (11210):

Examination type: Ongoing assessment
Grade scale: Passed or Not Passed
Preparation time: None
Duration: N/A
Aids allowed: N/A
Important Information: None
Prerequisites for examination: None

Welding and Material Understanding - BS1 (11211):

Examination type: Ongoing assessment
Grade scale: Passed or Not Passed
Preparation time: None
Duration: N/A
Aids allowed: N/A
Important Information: None
Prerequisites for examination: None

Electrical and Electronic Machinery and Systems - BS1 (11212):

Examination type:	Ongoing assessment
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	None
Prerequisites for examination:	None

Hydraulic - BS1 (11213):

Examination type:	Ongoing assessment
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	None
Prerequisites for examination:	None

Rigging Workshop - BS1 (11280):

Examination type:	Ongoing assessment
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	None
Prerequisites for examination:	None

Qualification prerequisites for professors/instructors etc.

Associate professors, assistant professors or instructors intended to be used in qualifying for certification under the STCW convention of 1978 as amended shall:

- have a qualification level that is the same or higher than the level of learning objectives for the subject
and
- have a full understanding of the subject-training programme and the specified objectives for each type of training being conducted.

Instructors of Elementary First Aid courses shall have completed a training programme for teachers of First Aid approved by the Danish First Aid Council.

Subject area:	12000	Work Experience (BS)		
Subject(s):	12100	Work Experience at Sea (Total 75 ECTS)		
	12110	Introductory Work Experience at Sea	BS2	30 ECTS
	12120	Introductory Work Experience at Sea	BS5	15 ECTS
			BS6	15 ECTS
	12130	Professional Work Experience at Sea	BS6	15 ECTS
Admission criteria:	Introductory Work Experience	The BS student must have passed all subjects in the first semester of the BS1 education in accordance to the course regulation for Master Marine.		
	Professional Work Experience	The BS student must have passed all subjects in BS1, BS2, BS3, BS4 and BS5 in accordance to the course regulation for Master Marine.		
Criteria to pass subject	<p>These assessments make up the subject:</p> <ol style="list-style-type: none"> 1. None assessments using the 7-point grade scale. <ul style="list-style-type: none"> • To pass the average of the assessments must be at least 2.0 (no rounding) 2. Three assessments graded Passed/Not Passed. <ul style="list-style-type: none"> • All assessments must be graded Passed. 			
Semester:	BS2 + BS5 + BS6			
ECTS credits:	75			
Course Regulations:	<ul style="list-style-type: none"> • Master Mariner (BS) version 5.80, 1 February 2021. 			
Orders:	<ul style="list-style-type: none"> • Order on the professional Bachelor Training programme for Masters – Danish order no 1611 of 13 December 2016, as amended. • Order on the professional bachelor training programme for Master - Danish order no. 1349 of 23 November 2018 as amended. This order is for students who were registered in BS1 for first time in the spring of 2019 or later (2019-2, 2020-1 ect.). • Order on tests in the maritime training programmes – Danish order no 1585 of 13 December 2016, as amended.. • Order on grading scale and other examination – Danish order no 114 of 3 February 2015, as amended. • Order on watchkeeping onboard ships – Danish order no 1758 of 22 December 2006, as amended. 			
STCW:	<p>STCW Code, as amended: Part A, chapter II - Master and deck department Section A-II/4</p> <ul style="list-style-type: none"> • Navigational at the support level as set in table A-II/4 			
Certificate(s):	<p><u>Course Certificate of Navigational Watchkeeping</u> is issued upon completion of at least 2 months relevant seagoing service is proved and completed the training programme prescribed in Regulation II/4, paragraph 1 to 3 of the STCW Convention, as amended</p>			

	and the Danish order no 1758 of 22 December 2006, as amended.

Expired:		
Remarks:	12 months = 365 calendar days 6 months = 183 calendar days 4½ months = 137 calendar days	3 months = 91 calendar days 2 months = 61 calendar days

Prerequisites for service at sea and change of study program

Service at sea:

- The duration of the introductory work experience at sea (subject: 12110+12120) equaling 60 ECTS credits and the duration of the professional work experience at sea (subject: 12130) equaling 15 ECTS credits is considered fulfilled when the effective service at sea amounts to a minimum of 12 months (365 calendar days).
- The professional work experience at sea must have a duration of a minimum of 3 months (91 calendar days) effective service at sea.
- The professional work experience at sea cannot be replaced by other service at sea or merit from another education.
- Earned service at sea in ferries must be documented by showing a service at sea certificate. If this is not possible, the service at sea will count for 50%.

Change of study program from BS to BM:

- By change of program from BS to BM education, the student can transfer earned service at sea from the introductory work experience at sea (subject: 12110) in the relation 1:1, though a maximum of 3 months (91 calendar days) of service at sea can be transferred to the introductory work experience at sea in the BM education.
- If a change of study causes an inconvenient study program, the student can apply for dispensation and get a part of the introductory work experience at sea postponed. However, the service at sea must at minimum be 4 months and 15 days (137 calendar days) in the introductory work experience at sea.
- The approved Training Record Book from the introductory work experience at sea in the BS education is replaced with the green Training Record Book for Marine Engineers

Change of study program from BS to BJ:

- By change of program from BS to BJ education, the student can transfer earned service at sea from the introductory work experience at sea (subject: 12110) in the relation 1:1, though a maximum of 3 months (91 calendar days) of service at sea can be transferred to the introductory work experience at sea in the BJ education.
- From the introductory work experience at sea (subject: 12120) the student can get 50% of the earned service at sea transferred to the introductory work experience at sea in the BJ education.
- The total transfer from the introductory work experience at sea in BJ education cannot exceed 6 (183 calendar days) months efficient service at sea

Purpose

During the Introductory work experience at sea of 6 months (183 calendar days) the student must also be part of the navigational watchkeeping under supervision of a qualified officer in order to acquire a watchkeeping certificate in accordance with the STCW conventions regulation II/4.

The navigational watch duty should be planned such that the student also gets the opportunity to stand watch by canal passages, sailing in trafficked waters and under maneuver. Emphasis must be put on understanding the necessity of following good discipline on the bridge and in the engine room, see STCW convention chapter VIII.

The student must have completed a minimum of 6 months navigational watch supervised by the Master or another qualified officer in accordance with STCW convention – regulation II/1.

In the professional work experience at sea, the student shall learn to work in a development-oriented and problem solving way with the profession as Master. The student will draw links between experiences and theoretical knowledge here by being able to identify and analyze subjects, fields and problems that are central in relation to the profession as Master.

The work experience shall lead to the exchange of knowledge, skills and values between education and profession/industry and the establishment of a network.

Learning objectives

Work Experience at Sea

Introductory work experience at sea - BS2 (12110):

The student must attain **knowledge** of:

- the maritime organization with a focus on communication, safety and cooperation

The student must attain **skills** necessary to:

- apply the skills learned at the training school in a ship organization
- conduct work safety and environmental considerations correctly

The student must acquire the necessary **competencies** to:

- communicate and collaborate on a ship
- utilize the most appropriate work method considering quality, time, material, safety and environment

Professional work experience at sea - BS5 & BS6 (12120+12130):

The student must attain **knowledge** of:

- the master's ordinary administrative routines
- the theory underlying the areas that the master deals with
- practical selection and application of tools and measuring equipment
- the typical ways of communication in a ship organization

The student must attain **skills** necessary to:

- handle practical situations occurring in the daily work
- apply the theory learned through the lessons
- deal with a selection of problems with a possible interdisciplinary background

The student must acquire the necessary **competencies** to:

- plan and complete smaller tasks belonging to the ship's field of action
- participate in the ordinary administrative routines occurring on the ship
- work in an interdisciplinary way with subjects belonging to the master education
- work in a development-oriented manner

Core literature

The latest issue of the "Training record book for preliminary seagoing service – Ships Officer Trainees".

The latest issue of the "Training record book for final seagoing service – Ships Officer Trainees".

Examination

Introductory work experience at sea - BS2 (12110):

Examination type: Ongoing assessment

Grade scale: Passed or Not Passed

Preparation time: None

Duration: N/A

Aids allowed: N/A

Important Information: The study administration supervises and ensures that the formal requirements in the Training Record Book are followed. If there is uncertainty or disagreements, the course is investigated by the Vice President (Academics) in collaboration with the student's shipping company. Ultimately the decision about which initiatives need to be further applied in order to receive the grading given, is decided by the Vice President (Academics).
The student must also show documentation for the service achieved at sea, which must be approved by the study administration.

Prerequisites for Examination: None

Introductory work experience at sea - BS5 & BS6 (12120):

Examination type: Ongoing assessment

Grade scale: Passed or Not Passed

Preparation time: None

Duration: N/A

Aids allowed: N/A

Important Information: The study administration supervises and ensures that the formal requirements in the Training Record Book are followed. Purpose

Interdisciplinary Elements should enhance the student's ability to solve complex problems experienced in his or hers professional life independently. Through working on projects students have the opportunity to develop competences to evaluate and improve work flow, work processes and procedures, and thus finding innovative ways to improve these.

Learning objectives

Interdisciplinary Elements I - BS3 (13110):

The student must attain **knowledge** of:

- Relevant professional subjects
- Problem identification

The student must attain the **knowledge** necessary to:

- work problemorientated

The student must acquire the necessary **competencies** to::

- Acquire and apply information on professional subjects

Interdisciplinary Elements II - BS4 (13120):

The student must attain the **knowledge** necessary to:

- Relevant professional subjects

The student must attain the **skills** necessary to:

- Understand different perspectives on a professional subject matter
- Take a critical stance on processes and procedures

The student must acquire the necessary **competencies** to:

- Assess complex issues

Interdisciplinary Elements III - BS7 (13130):

The student must attain **knowledge** of:

- The interdependence of professional fields

The student must attain the **skills** necessary to:

- Assess a problem from different perspectives and act taking all relevant conditions into consideration

The student must acquire the necessary **competencies** to:

- Demonstrate understanding of complex professional problems

Purpose

The student shall acquire the skills and knowledge in navigation, maneuvering and nautical meteorology necessary for him to plan and carry out a merchant ship's safe voyage, including to be able to function as a watchkeeping navigator on board merchant ships engaged in trade in all sea areas.

The student shall acquire the qualifications in the subject watch keeping, including regulations for preventing collisions at sea and watchkeeping teams, necessary to independently function as a watch-keeping navigator.

The student shall acquire the theoretical and practical qualifications in radio communication necessary for him to carry out the communication occurring on board a merchant ship.

The student shall be able to use maritime technical terms in English and shall be qualified to use English as a working language. Furthermore, the student shall acquire the qualifications in oral and written English communication necessary to function as a master on board a merchant ship engaged in international trade.

Learning objectives

Navigation

Navigation I - BS1 (14110):

The student must attain **knowledge** of:

- Nautical chart content and chart projection
- Basic principles of means of navigation including magnetic compass, gyrocompass and log
- Basic knowledge of technical equipment on the bridge including RADAR, GPS, VHF, AIS and ECDIS
- Compass design, compass card and it's directions
- Speed through water, speed over ground and distances
- Magnetic compass variation and deviation, deviation tables and variation as shown on nautical paper chart
- Gyro error
- Errors and uncertainty using terrestrial positioning

The student must attain the **skills** necessary to:

- Determine ship's position and measure distances in the nautical paper chart and ECDIS
- Use the nautical chart and ECDIS for basic voyage planning by use of waypoints taking vessel draught and sailing directions into consideration
- Determine ship's position by terrestrial means: marks, bearings and distance by RADAR and visually in both paper charts and ECDIS

The student must acquire necessary **competencies** to:

- Correct for current, wind, magnetic variation and deviation to obtain steered course, sailed course and course over ground
- Navigate by buoyage, IALA- system A, and cardinal marks

Navigation II - BS3 (14120):

The student must attain **knowledge** of:

- Nautical charts and publications
- Terrestrial and coastal navigation
- Celestial navigation
- Route planning
- Ship reporting systems and VTS
- Electronic systems of position fixing and aids to navigation
- Steering gear control
- Management of the chart portfolio
- Preparation of the route plan as instructed by the management of the vessel
- Recognize the limitations of hydrographic information and charts
- Utilizing the chart for navigation
- Utilizing electronic systems of position fixing and other electronic aids to navigation
- Calculations required for determining courses, speed and positions
- Tidal calculations
- Use and understand English language in relation to navigation

Navigation III – BS4 (14130):

The student must attain **skills** of:

- Use and understand nautical charts and publications
- Perform Terrestrial and coastal navigation
- Use Celestial navigation
- Conduct route planning
- Understand and use ship reporting systems and VTS
- Understand and use electronic systems of position fixing and aids to navigation
- Understand and use steering gear control
- Conduct management of the chart portfolio
- Preparation of the route plan as instructed by the management of the vessel
- Recognize the limitations of hydrographic information and charts
- Utilizing the chart for navigation
- Utilizing electronic systems of position fixing and other electronic aids to navigation
- Calculations required for determining courses, speed and positions
- Tidal calculations
- Use and understand English language in relation to navigation

The student must acquire necessary **competencies** to:

- Determination of position
- Conducting a safe voyage
- Maintaining a safe navigational watch based upon information from all navigational equipment
- Identify and reflect on key elements within the syllabus

Technical Navigation - BS4 (14130):

The student must attain **knowledge of**:

- Principles in satellite based navigation
- Principles of alternative electronic systems of position fixing and navigation
- Basic principles of radiowave propagation

The student must attain the **skills** necessary to:

- Use GPS to fix own ship position
- Operate the radar in relation to both navigation and anticollision including correct adjustments in relation to weather condition and relevant operating range
- Analyze data from instruments and have knowledge of limitations, errors and uncertainty

The student must acquire necessary **competencies** to:

- Operate GPS, AIS, Radar, logsystems and Echosounder as standalone as well as integrated instrument
- Appropriate approach for use of on board instruments

Basic and Advanced Simulator Course

Radar - Basic Simulator Course I - BS3 (14140):

The student must attain **knowledge of**:

- international performance standards related to the radar

The student must attain the **skills** necessary to:

- explain principles of the radar including factors affecting the radars performance and accuracy,
- explain how information from external sources such as gyro, log and GPS are integrated into the radar including error and uncertainty from such sources

Radar - Basic Simulator Course II – BS4 (14150):

The student must acquire necessary **competencies** to:

- operate the radar according to the manufacturer's instructions
- perform correct startup of radar
- Identify different types of display mode
- Identify information from radar to adjust and maintain the best possible radar picture taking into account clutter, false targets, actual range and the radars performance
- analyze radar targets including echoes from Racon, SART and false targets
- perform manual radar plotting in connection with collision avoidance including trial maneuver
- fixe and analyze the position based on radar bearings and/or radar ranges
- Use parallel indexing technique in radar navigation
- Identify current and drift and use the obtained information in relation to calculation of course to steer
- Identify and observe objects observed on the radar picture
- Determine risk of collision/ close encounter with an object and be able to use the international rules of the road to make the necessary precautions to avoid collision/ close encounter

- Explain test and maintenance of the radar according to manufacturer's instructions
- Recognize the effects of changes of course and/ or speed by either own ship or target in relative- and true motion
- Use rules and regulations in the international rules of the road and watch keeping procedures relevant in relation to the use of radar

ARPA - Basic Simulator Course I - BS3 (14140):

The student must attain knowledge of:

- international performance standards related to the ARPA
- principles of ARPA operation

ARPA - Basic Simulator Course II – BS4 (14150):

The student must attain the skills necessary to:

- explain factors affecting the ARPA's performance and accuracy including inputs from external sources like gyro, log and GPS
- explain the importance of ARPA alarms and use of user defined alarm levels and automatic system tests
- Recognize the effects of changes of course and/ or speed by either own ship or target in relative- and true motion
- Use rules and regulations in the international rules of the road and Watchkeeping procedures relevant in relation to the use of radar
- Use manual and automatic "acquisition" of objects
- identify and control targets observed on the radar picture
- fix and analyze the position based on radar bearings and/ or radar ranges
- plan and use parallel indexing technique in radar navigation

ARPA – Advanced Simulator Course – BS5 (14160):

The student must acquire necessary competencies to:

- operate the radars ARPA functions according to the manufacturer's instructions
- Use information obtained from the ARPA in relation to collision avoidance including trial maneuver
- Analyze the importance of relative/ true movements and speed through water/ over ground in relation to collision avoidance
- Use manual and automatic "acquisition" of objects
- fix and analyze the position based on radar bearings and/ or radar ranges
- plan and use parallel indexing technique in radar navigation
- identify current and drift and use the obtained information to calculate course to steer
- identify and control targets observed on the radar picture
- Determine any risk of collision/ close encounter with an object and be able to use the international rules of the road to make the necessary precautions to avoid collision/ close encounter
- Recognize the effects of changes of course and/ or speed by either own ship or target in relative- and true motion
- Use rules and regulations in the international rules of the road and Watchkeeping procedures relevant in relation to the use of radar

ECDS - Basic Simulator Course I - BS3 (14140):

The student must attain **knowledge** of:

- IMO's performance standards for ECDIS
- Limitations of ECDIS, errors and uncertainty, risk of overreliance and the effect of using different chart types

ECDS - Basic Simulator Course II – BS4 (14150):

The student must attain **skills** necessary to:

- Operate ECDIS on board including interface with other instruments and backup systems
- Perform maintenance of ECDIS installation
- Start up of ECDIS, changing own ship parameters, testing ECDIS and updating ECDIS
- Plan a route, validate a route and analyze alarms during validation

ECDS - Advanced Simulator Course - BS5 (14160):

The student must acquire necessary **competencies** to:

- Operate ECDIS during navigation including:
 - analyse alarms during navigation and react correct in case of malfunction
 - seek and understand relevant informations to ensure safe passage
 - compare limitations in ECDIS and its integrated instruments with the vessels actual position and use of alternative means to check the vessels position
 - Apply AIS, radar and target overlays and understand the meaning of the shown information

Full Mission Bridge Simulator Course - BS8 (14170):

The student must attain **knowledge** of:

- use radar based on completion of an approved radar training course
- use ARPA based on completion of an approved ARPA training course
- The international rules of the road including national regulation for navigating in Danish waters
- Distress- and rescue signals
- Watchkeeping standards
- Deck log book, checklists, procedures and instructions in relation to watchkeeping
- maritime Danish and English used in relation to watchkeeping
- position fixing by means of:
 - landmarks
 - navigation Aids equipment including radar
 - dead reckoning including effects from wind and current
 - buoyage
- magnetic- and gyrocompass including determining the error in the reading
- charts and publications for voyage planning and voyage including information for determining tide
- external communication
- IMO's Standard Marine Communication Phrases (SMCP)
Communication procedures in connection with search- and rescue operation including IMO's IAMSAR manual

The student must attain the skills necessary to:

- routine check of bridge equipment according to the STCW watchkeeping standards
- regular position fixing and dead reckoning
- correct reaction on received external messages (Navtex, emergency- urgent or safety related messages)
- correct reaction on internal information including alarms
- to observe and identify objects at sea:
 - in daylight: vessel identification and classification, size, aspect, any day signals
 - in darkness: navigation light, vessel identification and classification, aspect
 - in restricted visibility: assess the state of visibility and make appropriate precautions
- in good visibility use compass bearings to determine if risk of collision exists
- in good as well as restricted visibility use radar/ ARPA for long-range scanning and to determine if risk of collision exist by radar plotting
- determine and execute correct maneuvers if risk of close quarter- or collision situation exists
- submit maneuvering signals as prescribed by the rules of the road. Observe and react on light- and sound signals from other vessels
- taking over the watch
- standing and special orders for the watch
- recording log books

The student must by navigating in costal/ narrow waters demonstrate skills as mentioned above and further more demonstrate ability to:

- voyage planning according to international and national rules and regulations
- perform voyage according to the planning
- identify relevant buoyage
- perform regular position fixing by independent systems and plot these into available charts
- in connection with search- and rescue operation:
 - determine and plot position of emergency
 - establish and perform correct initial radio communication in relation to the emergency
 - decide and execute immediate action including determining course, distance and ETA at meeting position with the distressed
 - by alerting Man Over Board the student should demonstrate that the MOB buoy is released and position is noted
 - initiate avoidance maneuver relevant to vessel
 - alert Captain and engineer and sound Man- Over- Board signal on board the vessel
 - maneuver the vessel towards the position of the overboard person/ buoy in an appropriate manner
 - ensure that the MOB- boat is prepared for launching
 - if deemed emit radio announcement of Man- Over- Board

The student must acquire necessary competencies to:

- to achieve proficiency in the performance of a navigational watch as Officer Of the Watch (OOW) including use of procedures for watchkeeping in accordance with STCW convention and international rules of the road

Meteorology

Meteorology I - BS3 (14210):

The student must attain **knowledge** of:

- Fundamentals of Meteorology
- Meteorological Observation, organisations and services
- Wind, weather and pressure systems
- Upper air winds
- Oceans and oceanic currents
- Sea ice characteristics and areas where different type of ice can be expected in the area of operation
- Waves
- Weathercharts

Meteorology II – BS4 (14210):

The student must attain **skills** necessary to:

- Explain fundamentals of Meteorology
- Conduct meteorological observations
- Explain wind, weather and pressure systems
- Explain upper air winds
- Explain oceans and oceanic currents
- Identify sea ice characteristics and areas where different type of ice can be expected in the area of operation
- Explain wind created wave systems and characteristics
- Use and understand weathercharts
- Use handbooks and relevant publications
- Use English phrases related to meteorology
- Interpretation of information obtained from meteorological instruments

The student must acquire necessary **competencies** to:

- Observe the weather
- analyze the weather
- Use relevant publications related to voyage planning
- Identify and reflect on key elements within the syllabus

Watchkeeping

Watchkeeping I - BS1 (14310):

The student must attain **knowledge** of:

- Rules of the road at sea
- The "Vagtholdsbekendtgørelsen" (STCW code section A-VIII/2)
- The national regulations in Danish waters

The student must attain the **skills** necessary to:

- Identify sound signals and perform safe conduct under restricted visibility
- Identify maneuvering signals
- Navigate in traffic separation systems and narrow channels

- Perform a safe lookout duty
- Translate the various terms used in watchkeeping into English

The student must acquire necessary **competencies** to:

- Identify international emergency signals
- Ascertain the presence of risk of collision
- Decide which vessel has the right of way and what action to take
- Identify various categories of vessels, lights and day signals

Watchkeeping II - BS3 (14320):

The student must attain **knowledge** of:

- History of the Collision Regulations
- Identification and classification of all types of vessels based on lights, shapes and sound signals
- Visibility of lights and daysignals
- Positioning and technical details of lights and shapes
- Technical details of sound signal appliances
- Exemptions to the rules
- Conduct of Vessels in any Condition of Visibility
- Conduct of Vessels in Sight of One Another
- Conduct of Vessels in Restricted Visibility
- Manual plotting and actions to avoid collision
- IMO Recommendation on Navigational Watchkeeping
- Watchkeeping under certain circumstances ex. VTS, AIS, SAR, at anchor or at ground.
- National regulations

The student must attain the **skills** necessary to:

- Safely conduct a bridge watch at sea, in port and at anchor
- Conduct a manual radar plot in order to ascertain the risk of collision
- Conduct bridge watch with pilot on board (pilot assistance)
- Choose relevant navigational lights, daysignals and sound signals in any situation
- Choose relevant and legal collision avoidance manoeuvres in any situation both for vessels in sight of one another and for vessels in restricted visibility

Watchkeeping II SIMULATION (part of Watchkeeping II)

- The student must demonstrate **skills** necessary to:
 - To identify vessels during exercise in simulator. Identification includes day signals and sound signals for restricted visibility
 - To avoid collision during exercise in simulator

The student must acquire necessary **competencies** to:

- To safely navigate a vessel in accordance with the International Collision Avoidance Rules and IMO Recommendation on Navigational Watchkeeping
- To avoid collision based on a manual radar plot
- To assess any situation that might occur during watch keeping and to act in accordance with International Collision Avoidance Rules and IMO Recommendation on Navigational Watchkeeping
- To cooperate about the safe navigation of the ship during times with pilot on board
- To cooperate about the safe navigation with the crew on board

GMDSS - Global Maritime Distress and Safety System - BS5 (14330):

The student must attain **knowledge** of:

- GMDSS overview
- Basic methods of communication
- Shipboard equipment for GMDSS
- Ship radio license
- Maritime radio frequencies both for daily use and for distress only
- Maritime radio frequencies bandwidth
- Sources of energy and battery capacity
- General regulations
- Antennas necessary to operate the equipment

The student must attain the **skills** necessary to:

- Conduct briefing about communication in general
- Use appropriate handbooks
- Use English communication phrases
- Participate in Search And Rescue (SAR/IAMSAR)
- Conduct general troubleshooting
- Use relevant Radio- and shipslog
- Demonstrate knowledge about LRIT and SSAS
- Establish contact to Radio Medical by relevant equipment based on any given position
- Conduct daily, weekly, monthly and yearly check of equipment

The student must acquire necessary **competencies** to:

- Demonstrate the use of Distress procedures (conduct distress, urgency and safety calls)
- Use the Phonetic Alphabet
- Choose correct Distress-, urgency- and safety frequencies based on location
- Demonstrate the use of the equipment for routine/public calls (conduct a routine call)
- Choose correct VHF channel for daily use/routine calls (DSC, ship/ship; ship/shore; shore/ship)
- Choose correct MF/HF channel/frequency for daily use/routine calls (DSC, ship/ship; ship/shore; shore/ship)
- Identify and use relevant Distress signals
- Be able to identify relevant frequencies for transmitting and receiving transmissions on VHF, MF/HF both for daily use and for distress only
- To use relevant equipment in any situation, including; VHF, MF/HF, InmC, Fleet77, EPIRP, SART, NAVTEX/MSI and the use of DSC
- To choose relevant means of transmission in any situation (Voice/Telex/Satellite) both for daily use (public correspondence) and for distress only
- Identify Relevant GMDSS equipment for the area of trading
- Cancellation of False alert
- Conduct radio watch in any situation

Core literature

- Navigation:** "Navigation 1-10," & "Opgaver"; Jørgen Wittrup or equally updated books by author Niels Holland
"Bowditch – The American Practical Navigator"
Other handbooks and materials as per lectureres choice – see lesson plan
- Simulation:** Core literature will be introduced by responsible lecturer
- Meteorology:** "Meteorologi og Oceanografi for skibsofficerer", Mette Hundahl
Other relevant handbooks and materials as per lectureres choice – see lesson plan
- Watchkeeping** "Søvejsreglerne"; Søfartsstyrelsen
"A guide to the collision avoidance rules"; A N Cockroft and J N Lameijer
Other relevant handbooks and materials as per lectureres choice – see lesson plan
- GMDSS:** "GMDSS A user's handbook" – Forfatter: Denise Bréhaut. Forlag Bloomsbury. ISBN: 978-1-4081-8782-1. Nyeste udgave.
"Admiralty List of Radio Signals Volume 5" (in class)
"ITU handbook" (in class)
"IAMSAR Volume III"; (in class)
Other relevant handbooks and materials as per lectureres choice – see lesson plan

Examination

Navigation I - BS1 (14110):

Examination type:	Ongoing assessment
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	None
Prerequisites for examination:	None

Navigation II + Meteorology I - BS3 (14120 & 14210):

Examination type:	Internal written test
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	3 hours
Aids allowed:	None
Important Information:	This examination is only for students who were registered in BS3 in the fall of 2019 or earlier (2019-1, 2018-2, 2018-1 ect.). The internal written test consists of a Navigation part and a Meteorology part; both parts must be separately passed in order to pass the test
Prerequisites for examination:	None
Prerequisites for examination:	None

Navigation II + Meteorology I - BS3 (14120 & 14210):

Examination type:	2 internal written tests
Grade scale:	7-point scale
Preparation time:	None
Duration:	2 x 2 hours
Aids allowed:	Defined by teacher – see the lesson plan
Important Information:	This examination is for students who were registered in BS3 in the spring of 2020 or later (2020-2, 2021-1, 2021-2 ect.). The internal written assignments consists of a Navigation part and a Meteorology part; the two assignments are given one grade of the 7-point scale and accounts for 20% of the final grade in Navigation III & Meteorology II exam.
Prerequisites for examination:	None
Prerequisites for examination:	None

Navigation III + Meteorology II - BS4 (14130 & 14220):

Examination type:	External oral exam
Grade scale:	7-point scale
Preparation time:	40 minutes
Duration:	50 minutes
Aids allowed:	The presentation portfolio folders. During the preparation time relevant software, textbooks and handbooks used during the semesters are available.

Important Information: **This examination is only for students who were registered in BS3 in the fall of 2019 or earlier (2019-1, 2018-2, 2018-1 ect.).**

In the examination room, the student draws two questions and one of the presentation portfolio folders.

- The first part of the exam regarding the first drawn question lasts approximately ten minutes and is successfully completed when the student has demonstrated ability to apply his/her navigation and/or meteorology skills.
- The second part of the exam regarding the second drawn question is related to technical navigation. The duration is approximately ten minutes.
- As third part of the exam the student presents the portfolio and his/her reflections based on the portfolio. The duration of the presentation and reflections should be approximately ten minutes. Following this examination will focus on the portfolio topic and can include elements of the remainder of the syllabus. The examination includes the knowledge, skills and competencies required to pass the Interdisciplinary Elements II.

The student will receive one grade based upon the student's presentation and performance at the exam.

Prerequisites for examination: None

Navigation III + Meteorology II - BS4 (14130 & 14220):

Examination type:	External oral exam
Grade scale:	7-point scale The oral exam accounts 80% of the final grade and the assignment from Navigation II and Meteorology I accounts 20% of the final grade.
Preparation time:	40 minutes
Duration:	50 minutes
Aids allowed:	The presentation portfolio folders. During the preparation time relevant software, textbooks and handbooks used during the semesters are available.

Important Information: **This examination is for students who were registered in BS3 in the spring of 2020 or later (2020-2, 2021-1, 2021-2 ect.).**

In the examination room, the student draws two questions and one of the presentation portfolio folders.

- The first part of the exam regarding the first drawn question lasts approximately ten minutes and is successfully completed when the student has demonstrated ability to apply his/her navigation and/or meteorology

skills. The skill testing assignment must be appropriate to the preparation time given.

- The second part of the exam regarding the second drawn question is related to technical navigation. The duration is approximately ten minutes.
- As third part of the exam the student presents the portfolio and his/her reflections based on the portfolio. The duration of the presentation and reflections should be approximately ten minutes. Following this examination will focus on the portfolio topic and can include elements of the remainder of the syllabus. The examination includes the knowledge, skills and competencies required to pass the Interdisciplinary Elements II.

The student will receive one grade based upon the student's presentation and performance at the exam.

The portfolio consists of 7 topics in navigation and 7 topics in meteorology

Prerequisites for examination: None

Basic Simulation Course I - BS3 (14140):

Examination type: Ongoing assessment
Grade scale: Passed or Not Passed
Preparation time: None
Duration: N/A
Aids allowed: N/A
Important Information: None
Prerequisites for examination: Compulsory attendance for all simulator exercises

Basic Simulation Course II - BS4 (14150):

Examination: Ongoing assessment
Examination type: Passed or Not Passed
Grade scale: None
Duration: N/A
Aids allowed: N/A
Important Information: None
Prerequisites for examination: Compulsory attendance for all simulator exercises

Advanced Simulation Course - BS5 (14160):

Examination type: Ongoing assessment
Grade scale: Passed or Not Passed
Preparation time: None
Duration: N/A
Aids allowed: N/A
Important Information: None
Prerequisites for examination: Compulsory attendance for all simulator exercises

Full Mission simulation - BS8 (14170):

Examination type:	Ongoing assessment
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	Voyage planning must be prepared in advance of course. The student might be rejected on basis of missing planning
Prerequisites for examination:	Compulsory attendance for all simulator exercises

Watchkeeping I - BS1 (14310):

Examination type:	Ongoing assessment
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	None
Aids allowed:	N/A
Important Information:	N/A
Prerequisites for examination:	None

Watchkeeping II - BS3 (14320):

Examination type:	External written exam
Grade scale:	7-point scale
Preparation time:	None
Duration:	3 hours
Aids allowed:	N/A
Important Information:	N/A
Prerequisites for examination:	None

GMDSS – BS5 (14330):

Examination type:	External oral exam
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	45 minutes
Aids allowed:	None
Important Information:	None
Prerequisites for examination:	None

Qualification prerequisites for professors/instructors etc.

Associate professors, assistant professors or instructors intended to be used in qualifying for certification under the STCW convention of 1978 as amended shall:

- have a qualification level that is the same or higher than the level of learning objectives for the subject
and
- have a full understanding of the subject-training programme and the specified objectives for each type of training being conducted.

If conducting training using a simulator the instructor shall:

- have received appropriate guidance in instructional techniques involving the use of the simulator
and
- have gained practical operational experience on the particular type of simulator being used

Purpose

Ship Technology II & III:

The purpose of ship technology is for the student through the instruction, to acquire the qualifications in ships' design and conditions related to ships' stability, buoyancy, draught, trim and effects on the hull necessary to function safely as a watch keeping deck officer on board merchant ships in accordance with the conventions in force.

Furthermore, the student shall acquire the qualifications necessary to function safely as a watch keeping deck officer in connection with cargo handling and stowage on board a merchant ship engaged in inter-national trade.

Maritime Technology:

The purpose of maritime technology is for the student through instructions to acquire the qualifications necessary for him to safely take care of the operation of minor ship machinery in a proper manner in terms of safety on ships where there is no requirement for an engine crew.

Furthermore, the student shall acquire an understanding of technical systems and environmental protection so that he can act safely, rationally and correctly as a master and localize and remedy simple defects in common technical systems in ships.

Finally, the student shall acquire practical qualifications related to structural evaluation and theoretical knowledge about maintenance enabling him to perform the function as a maintenance manager.

Basic Maritime Automation:

The purpose of maritime automation is for the students acquire the basic qualifications in data retrieval, data-logging, adjustment and steering technique necessary for him to act rationally and correctly when monitoring and operating ship control systems.

Ship Operations:

The purpose of ship operations is for the student to gain the necessary knowledge, skills and competencies to perform the duties of master in port and at sea in an efficient, economic and safe manner whilst observing good seamanship.

Medical Care:

That the participant, through active participation in the training programme, shall acquire skills so that he can act independently on board with pre-hospital procedures as well as be the responsible medical caretaker on board ships with a medicine chest category A.

Learning objectives

Ship Technology

Practical sailing - BS1 (15110):

The student must attain **knowledge** of:

- None

The student must attain the **skills** necessary to:

- Perform the knots and hitches that are appropriate in a given ship-handling situation and explain the advantages and disadvantages of the various knots and hitches used.
- Perform safe ship handling
- Keep a given course
- Perform a safe start up and operation of various inboard and outboard engines on small vessels.

The student must acquire the necessary **competencies** to:

- Demonstrate Steering, maneuvering, mooring and anchoring of a small power-driven vessel.
- Perform MOB.
- Demonstrate steering and maneuvering of a vessel under oars.
- Demonstrate ability in English to understand, respond and give helm-, maneuvering-, mooring and anchoring orders.

Ship Technology I – BS1 (15120):

The student must attain **knowledge** of:

- Technical maritime vocabulary in Danish and English
- Methods of mooring and anchoring
- Ship construction in general terms.
- Various types of vessels and their characteristics and use

The student must attain the **skills** necessary to:

- Determine tank level by means of sounding and ullage.
- Act safely during loading and discharge of various types of vessels.
- Use the IMDG code to identify label and separate/segregate various dangerous cargoes.
- Understand and use the terms gravity, buoyancy, and water density.
- Understand the influence of the distribution of weight on the ships stability, trim and hull.

The student must acquire the necessary **competencies** to:

- Read draft marks and plimsoll marks.

Basic Training for Oil, Chemical and Gas Tanker (15125):

The student must attain **knowledge** of:

- Types of oil, chemical and liquefied gas tankers, their equipment and operation
 - Piping systems and valves
 - Cargo pumps
 - Loading and unloading
 - Tank cleaning, purging, gas-freeing and inerting
- Cargos and properties

- Pressure and temperature, including vapour pressure/temperature relationship
- Types of electrostatic charge generation
- Chemical symbols
- ESD
- Safety culture and management
- Operational cargo hazards and how they are controlled
 - Health hazards
 - Environmental hazards
 - Corrosive hazards
 - Explosive and flammability hazards
 - Sources of ignition, including electrostatic hazards
 - Toxicity hazards
 - Vapour leaks and clouds
 - Extremely low temperatures
 - Pressure hazards
 - Inerting, water padding, drying agents and monitoring techniques
 - Anti-static measures
 - Ventilation
 - Segregation
 - Cargo inhibition
 - Importance of cargo compatibility
 - Atmospheric control
- Contents and purpose of a MSDS
- Safety equipment and PPE
 - Breathing apparatus and tank-evacuating equipment
 - Resuscitators
 - Rescue and escape equipment
- Gas-measuring equipment
- Safe operation of the vessel
- Safe working practices incl. legislation and guidelines
 - Precautions to be taken when entering enclosed spaces
 - Precautions to be taken before and during repair and maintenance work
 - Safety measures for hot and cold work
 - Electrical safety
 - Ship/shore safety check list
- Emergency action in case of injury, fire or spill
 - Reporting to responsible persons
 - SOPEP
 - Prevention of brittle fractures

The student must attain the **skills** necessary to:

- Identify and take precautions to prevent hazards
- Apply occupational health and safety precautions and measures
- Take precautions to avoid pollution from cargo

The student must acquire the necessary **competencies** to:

- Contribute to safe operation of tankers

Ship Technology II - BS3 (15130 or 15131):

Knowledge:

- Static and dynamical stability
- Inclining experiment
- Intact stability legislation
- Internal and external factors affecting ship stability incl. superstructure and deck icing, ice accretion and prevention and removal of same
- Ice strengthening requirements and ice-class limitations
- Adverse internal and external forces affecting hull strength and how to mitigate these incl. ice pressure monitoring on hull and common areas for ice damage on hull and equipment
- Draught and Load Lines
- Damage stability

Skills:

- Apply hydrostatic data from trim and stability booklets in list, draught, transverse and longitudinal stability calculations
- Calculate stability in heavy lift situations including loss of load
- Calculate maximum draught in various load line zones
- Calculate global hull stress on box shaped vessels
- Calculate effects of simple bilging

Competencies:

- Assess compliance with general intact stability criteria including the severe wind and rolling criteria
- Assess compliance with the Load Line Convention

Ship Technology III - BS4 (15140 or 15141):

Knowledge:

- Conventions, Codes and Guidelines pertaining to cargo operations
- Safe handling, stowage and securing of cargoes, including dangerous, hazardous and harmful cargoes, and their effects on the safety of life and the ship in all conditions including polar waters
- Optimization of ship operation by cargo planning and ballast handling in all conditions including polar waters
- The purpose of the enhanced survey program
- Damage stability regulations

Skills:

- Apply data from ship type specific trim and stability booklets in ship operation and ship stability calculations
- Cargo volume and weight calculations
- Application of codes on cargo handling
- Use of cargo stowage and securing manual
- Utilize computerized stability instruments
- Utilize damage stability information

Competencies:

- Assess ship stability and stress condition based on cargo condition and ship type specific trim and stability book including intact and damage stability criteria
- Segregate cargo in accordance with Codes and trade practice
- Interpret of stress and stability data from computerized stability instruments
- Conduct draught survey
- Assess reported defects and damage to cargo spaces, hatch covers and ballasts and take appropriate action
- Prepare plans for cargo operations and ballast handling for the ship management
- Monitor cargo operations and cargoes during voyages
- Ensure compliance with pollution prevention requirements
- Demonstrate the ability in English to explain and give orders in matters relating to cargo operations based on cargo condition and properties and on stability, draught, list, trim and stress

Maritime Technology

Maintenance - BS1 (15210):

The student must attain knowledge of:

- Different surface treatment methods, including paint systems and electroplating.
- Use of antifouling paints on a vessel (anti-fouling).
- The different causes of corrosion on steel and other metals and preventive action.
- Basic cleaning/de-salting of the vessel and its equipment.
- Preventive maintenance, including maintenance of intact coating and lubrication of components on a vessel.
- Various maintenance systems, including a vessel/component maintenance plan.:

The student must attain the skills necessary to:

- None

The student must acquire the necessary competencies to:

- None

Environment - BS1 (15220):

The student must attain knowledge of:

- MARPOL legislation at a basic level.
- Air and water pollution from ships including basic combustion theory.
- Exhaust gas emissions in Emission Control Areas.
- Current measures to reduce emissions (NO_x, SO_x, CO etc.) from a vessel's main and auxiliary machinery
- The various piping arrangement on a merchant vessel for sludge, sewage, bilge, and ballast.

The student must attain the skills necessary to:

- Act responsibly during SOPEP drills and in emergency situations
- Act environmentally responsible in the daily routine work.
- Distinguish between bilge water, sewage, and sludge and put it into the correct tanks

The student must acquire the necessary competencies to:

- Know when and how to raise the alarm onboard in case of oil spill or pollution
- Handle garbage onboard according to the garbage plan.

Motor Operation - BS1 (15250):

The student must attain **knowledge** of:

- The management and automation of the most common mechanical components/systems.
- The construction of 2 and 4 stroke engines and how they work.
- Identifying the most common machine components on a vessel and be able to identify them
- Drainage systems
- Components in fuel systems

The student must attain the **skills** necessary to:

- Perform basic ship engine maintenance.
- Use general engineering documentation present on a vessel.

The student must acquire the necessary **competencies** to:

- Independently manage a ship engine start-up and shutdown and its operation during running.

Maritime Technology - BS4 (15230):

The student must attain **knowledge** of:

- Operating principles and maintenance of cargo handling equipment, propulsion and maneuvering systems and firefighting systems*
- Anti-pollution procedures in and outside special areas incl. polar waters and all associated equipment incl. limitations of oil-spill equipment in polar conditions
- The importance of proactive measures to protect the environment incl. polar environment hereunder the lack of infrastructure, plans for waste storage and the effect of an oil spill in polar waters
- Maintenance theory and practice
- Environmental protection equipment
- Winterization and preparedness of vessel including deck, superstructure insulation and engine
- Engineering requirements for operating in ice incl. awareness of engine loads and cooling problems hereunder sea suction and water intake
- Polar conditions influence and limitation on performance of equipment, machinery and shipboard systems.

*For full details of knowledge learning objectives for advanced fire fighting theory see syllabus 11000

The student must attain the **skills** necessary to:

- Operate remote controls of propulsion plants, engineering systems and services

The student must acquire the necessary **competencies** to:

- Conduct operational optimization of vessel operation
- Monitor shipboard operation and ensure compliance with MARPOL requirements are fully observed in and outside special areas incl. polar waters
- Operate remote controls of propulsion plants and engineering systems and services

Basic Maritime Automation – BS5 (15240):

The student must attain **knowledge** of:

- Sensors
 - General purpose sensors
 - Standard sensor signals
 - Calibration of sensors and uncertainties
- Intergraded ship control systems
 - Setting and optimization of control loop process
 - Human machine interface
 - Data exchange and logging in networks
 - P&I diagram

Ship Operations - BS7 (15310):

The student must attain **knowledge** of:

- Ship's maneuvering characteristics and ancillary equipment and their effect on the ship's maneuvering capabilities
- A vessels movement and characteristics in adverse conditions hereunder polar waters
- Bridge team management principles and their application
- Risk management principles
- Decision making during non-routine/emergency operations
- Factors contributing to safe operations, environmental protection and commercial interests
- Emergency towing arrangements and towing procedure
- Ship energy efficiently management and operation

The student must attain the **skills** necessary to:

- Conduct a route optimization in deep sea and shallow waters
- Operational risk assessment during routine and extreme conditions incl. polar waters
- Undertake a qualified risk assessment of all factors contributing to the safe handling of the ship
- Obtain and maintain situational awareness
-

The student must acquire the necessary **competencies** to:

- Maneuver and handle a ship in all conditions, including emergency situations
- Respond to navigational emergencies
- Optimize planning of voyage, with regard to predicted conditions
- Plan and ensure safe loading, stowage, securing, care during the voyage and unloading of cargoes in all conditions incl. polar waters
- Demonstrate ability in English to produce written reports to principals and interested parties

Medical care – BS5 (15320):

The student must attain **knowledge** of:

- identify, examine, handle and look after injured and sick persons;
- observe objective and subjective symptoms and document values;
- basic knowledge about anatomy and physiology related to each individual lesson;
- knowledge about medicine chest CR.

The student must attain the **skills** necessary to:

- identify and use the mobile resuscitation equipment
- use the Danish Maritime Authority's "Medical Book for Seafarers", "Radio Medical records" and the Danish Maritime Authority's "Record, control document and user guidelines A"
- carry out independently the first-aid and pre-hospital medical caretaker procedures mentioned in the Danish Maritime Authority's "Medical Book for Seafarers"
- insert an intravenous cannula, insert a drip and use injection techniques.

The student must acquire the necessary **competencies** to:

- function as the Radio Medical doctor's eyes, ears and hands when treating a sick or injured person by using the contents of "Medical Book for Seafarers", the "Record, control document and user guidelines category A", and "Radio Medical records" under the framework of current law.

Basic Training for Oil, Chemical and Gas Tanker - BS1 (15125):

Examination type:	Ongoing assessment
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	None
Prerequisites for examination:	None

Ship Technology II - BS3 (15131):

Examination type: Internal oral test

Grade scale: 7-point scale

Preparation time: None

Duration: 30 minutes

Aids allowed: Only the actual cases including own supporting notes are allowed.

Important Information: **This examination is for students who were registered in BS3 for first time in the spring of 2019 or later (2019-2, 2020-1 ect.).**

Each student draws a case in the examination room. The case is presented.

Duration of the case presentation should last about 10 minutes and the duration of the cross evaluation of the case topic and remainder of the subjects syllabus should last about 10 minutes. The cases are introduced to the students during the semester.

In the examination room, each student also draws a technical question. The presentation of the technical question should last about 5 minutes. The students are familiarized with the technical questions at the latest on the last day of teaching.

The student is given one grade and guidance on topics on which the student needs to focus on.

Prerequisites for examination:

None

Ship Technology III - BS4 (15141):

Examination type: External oral exam

Grade scale: 7-point scale

Preparation time: 24 hours

Duration: 45 minutes

Aids allowed: During preparation time, all aids are allowed.

At the examination only calculations, plans, graphs and own notes supporting the presentation of the scenario are allowed.

Important Information: **This examination is for students who were registered in BS3 for first time in the spring of 2019 or later (2019-2, 2020-1 ect.).**

Each student is randomly assigned a scenario by WiseFlow or the Student Services.

The presentation must cover all relevant aspects of stability, cargo planning and handling. Where relevant decisions in cargo planning and handling based on hull stress, draught, list, transverse and longitudinal stability etc. these topics must be included. The presentation should last about 10 minutes and the duration of the cross examination of relevant topics of the scenario should last about 25 minutes.

In the examination room, the student will draw a scenario requiring an oral instruction in English. Duration is about 5 minutes. The students are familiar with the scenarios requiring an oral instruction in English latest on the last day of teaching.

The student is given one grade.

Prerequisites for examination:

None

Ship Technology II & III - BS4 (15130 & 15140):

Examination type:	External oral exam
Grade scale:	7-point scale
Preparation time:	24 hours
Duration:	45 minutes
Aids allowed:	During the preparation time all aids are allowed. At the examination only calculations, graphs and short notes supporting the presentation of scenario are allowed.
Important Information:	This examination is for students who were registered in BS3 for first time in the fall of 2018 or earlier (2018-1, 2017-2 ect.). Each student is randomly assigned a scenario by WiseFlow or by the Study Services. The presentation of the scenario covering all relevant tropics of stress, transverse and longitudinal stability, cargo handling etc. should last about 10 minutes and the duration of the cross examination in relevant tropics of the scenario is about 20 minutes. In the examination room, the student will draw a technical question from the subject and a scenario requiring an oral instruction in English. Duration of the two topics is about 10 minutes. The student is given one grade
Prerequisites for examination:	None

Maintenance - BS1 (15210):

Examination type:	Ongoing assessment
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	None
Prerequisites for examination:	None

Environment - BS1 (15220):

Examination type:	Ongoing assessment
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	None
Prerequisites for examination:	None

Motor Operation - BS1 (15250):

Examination type:	Internal oral est.
Grade scale:	Passed or Not Passed
Preparation time:	None.
Duration:	30 minutes
Aids allowed:	All.
Important Information:	This internal oral test is a practical test and a part of test to obtain Certificates of competency in motor operation (Duelighedsprøve i motorpasning).
Prerequisites for examination:	The assigned case must be passed before the internal oral test

Maritime Technology - BS4 (15230):

Examination type:	External oral exam
Grade scale:	7-point scale
Preparation time:	None
Duration:	30 minutes
Aids allowed:	All
Important Information:	Each student draws a shipboard system. The students are familiar with the system drawings/plans latest on the last day of teaching: The student presents the system. The presentation must include the technical configuration of the system, required maintenance and the system pollution risks and how pollution of the environment is prevented from the system.
Prerequisites for examination:	None

Basic Maritime Automation – BS5 (15240):

Examination type:	Ongoing assessment
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	
Prerequisites for examination:	None

Ship Operations - BS7 (15310):

Examination type:	External oral exam
Grade scale:	7-point scale
Preparation time:	None
Duration:	40 minutes
Aids allowed:	The four presentation portfolio folders
Important Information:	<p>At the oral exam of the Ship Operations each individual student draws one of four presentation portfolio folders. The student presents the portfolio and his or her reflections based on the portfolio. Duration of the presentation and reflections should be approximately 20 minutes.</p> <p>Following the examination will focus on the portfolio topic and can include elements of the remainder of the subject syllabus.</p> <p>The portfolio topics are:</p> <ul style="list-style-type: none">• Operational Optimization• Adverse Situations• Ship Handling• Route Optimization <p>The examination includes the knowledge, skills and competencies required to pass the subject Interdisciplinary Elements III.</p> <p>The student will receive only one grade based upon the student's presentation, reflections and performance at the exam.</p>
Prerequisites for examination:	None

Medical Care – BS5 (15320):

Examination type:	Ongoing assessment
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	
Prerequisites for examination:	None

Qualification prerequisites for professors/instructors etc.

Associate professors, assistant professors or instructors intended to be used in qualifying for certification under the STCW convention of 1978 as amended shall:

- have a qualification level that is the same or higher than the level of learning objectives for the subject
and
- have a full understanding of the subject-training programme and the specified objectives for each type of training being conducted.

If conducting training using a simulator the instructor shall:

- have received appropriate guidance in instructional techniques involving the use of the simulator
and
- have gained practical operational experience on the particular type of simulator being used

Purpose

Management overall:

The purpose of this Management module is to prepare the ship's officer for a future managerial position as senior officer and Master at sea or as superior on shore.

The core elements will provide the student with the required qualifications within the fields of economy and quality assurance necessary to improve their personal development.

The student will also obtain the necessary qualifications within national and international maritime legislation and administrative matters to serve as master with knowledge of the duties and responsibilities associated with this position.

Students should be able to use English as the international working language in shipping management, business organization and human resources.

Maritime Law and Ship Administration & Safety and Quality Shipping:

The objective of this subject is to qualify the student to understand and conduct the legal and administrative duties of a ship officer and master with due regard to securing the interests of his principals. These include the vessel, her owner, managers, charterer, crew, the international community and the environment.

Upon completion of the subject, the student will also gain the necessary knowledge, skills and competencies to carry out safety and quality assurance in accordance with the International Management Code for the Safe Operation of Ships and Pollution Prevention, the duties of the Ship Security Officer in accordance with the ISPS Code as well as Basic Polar Training. Furthermore, the participant will qualify to undertake the function of person in charge of safety work and as a member of the safety organization and promote a safe and healthy working environment on board merchant vessels.

This subject will provide the student with knowledge skills and competencies to understand the structure of the Maritime Organization at national and international level including a holistic understanding of ship owning and management seen in the complex context of the shipping trade. It is a fundamental goal of this subject that the participant understands the importance of applying his knowledge of the part-topics of this syllabus in an innovative, holistic and interdisciplinary fashion.

Methodology:

The objective of the subject methodology is to qualify the students for project work, gathering information and provide knowledge of scientific methods.

Maritime Economics:

The objective of this subject is to qualify the student to understand and conduct economic and business duties of a ship officer and master with due regard to securing the interests of his principals. These include the vessel, her owner, managers, charterer crew and the international community

Upon completion of the subject, the student will gain the necessary knowledge, understanding, skills and competencies to carry out the economical control and management of a ship. It is a fundamental goal of this subject that the participant understands the importance of applying his knowledge of the part-topics of this syllabus in an innovative, holistic and interdisciplinary fashion.

Human Resource Management:

The objective of this subject is to prepare the student for the role of master where he will be required to promote the development process of subordinates within the organization and acquire the necessary Human Resource Management and Crew Resource Management skills to perform leadership in a global perspective. Furthermore, the student will understand organizational processes and basic strategic management.

Standard Based Tools:

Will provide the student with a fundamental understanding of principles and methods and regulation within the field of occupational Health, Safety, Environment and Quality management systems. This will enable them to implement, coordinate and monitor these systems at management level.

This course will furthermore prepare the student to undertake the role of maintenance manager through comprehension of maintenance management principles and tools commonly used within the industry.

Master Module:

Shipping and Chartering:

The subject provides participants with basic comprehension of chartering contracts and ships' employment. The main focal point is how masters' and ship officers' can exercise commercial prudence and protect the interest of the owner whilst conducting cargo operations and performing voyages.

Negotiating Skills:

This negotiating skills subject will enable students to understand how they can negotiate constructively with principals, colleagues, suppliers and shipping contacts and be able to carry out a negotiation which creates a win-win outcome for all parties. This subject covers all the basics of negotiating in a practical and interactive way.

Docking:

The purpose of docking is for the student to attain knowledge about standard docking procedures and practices to acquire the necessary skills to communicate and cooperate with shipyard and classification society on an operational level.

Shipping Economics:

The subject provides participants with a basic comprehension of shipping trade mechanisms, shipping market cycles, the freight, sale and purchase, newbuilding and demolition markets and ships' employment at ship officer level enabling them to comprehend ship owners' and ship managers' choice of vessels employment.

Learning objectives

Maritime Law and Ship Administration

Maritime Law and Ship Administration I - BS3 (16111):

The student must attain **knowledge** of:

- National and international maritime regulation
- Legislative bodies within the maritime legal system
- International conventions governing maritime law
- Seafarer's rights and obligations
- Seafarers' legal rights under MLC and collective bargaining agreements
- Crew insurance and injury
- Domestic and foreign crewing contracts
- The importance of accurate log keeping and record entries
- Antarctic Treaty and the Polar Code;

The student must attain the **skills** necessary to:

- Apply knowledge of national and international law related to their duties on board
- Determine whether the rights of the seafarer under the MLC are adhered to
- Advise ratings on their rights and obligations
- Use English terminology in relation to the ship's administration

The student must acquire the necessary **competencies** to:

- Complete correct entries in logs and record books

Maritime Law and Ship Administration II (including SSO) - BS4 (16121):

The student must attain **knowledge** of:

- Ship Security at SSO level
- Vessel inspections
- The roles of the Flag State, Class Society, Port State Control
- Certification and adherence with governing laws and regulations
- Rest hour regulations
- Environmental protection including:
 - IMO and environmental protection conventions
 - Environmental documentation
 - Limitation of Liability for environmental claims

The student must attain the **skills** necessary to:

- Conduct Security Assessments of the vessel and be responsible for security related matters at SSO level
- Comply with legal and administrative duties under environmental law
- Comply with rest hour regulations
- Understand the interrelationship of various inspecting authorities

The student must acquire the necessary **competencies** to:

- Instruct and train crew members on security matters and pirate threats
- Participate in class and flag state inspections
- Assist in preparing the vessel for PSC inspections
- Complete logs and record books to the satisfaction of inspecting authorities

Maritime Law and Ship Administration III - BS7 (16132):

The student must attain **knowledge** of:

- Master's duties and responsibilities as representative of the shipowner, operator, charterer and cargo owner
- Crew management
- Salvage and towage agreements
- General average
- Marine insurance,
- The ship owner's and charterer's insurance requirements and areas of cover under various policies
- Accident and average investigations
- Maritime lien and arrest
- Letters of protest and legal documentation
- Chartering and freight markets including legal and financial matters concerning ships' business
- Understanding the implications of letters of indemnity
- Chartering documents and their application
- Vessel management and the contractual obligations of the shipowner under commercial contracts
- The duties of the carrier under various limitation of liability regimes
- Organizational structure
- Interaction between shipping company departments
- Interaction between shareholders and stakeholders

The student must attain the **skills** necessary to:

- Make qualified decisions on legal and commercial matters affecting the crew, shipowner, cargo owner, flag state, class society and insurers
- Gather evidence following accidents in order to secure the legal position of his employers, crew and interested parties
- Utilizing administrative knowledge in maintaining the vessel in a crew-worthy, seaworthy and cargo-worthy state
- Critically analyzing complex situations in order to protect the legal and commercial interests of the shipowner
- Manage the vessel's certificates
- Manage the vessel's Safety Management System
- Manage the vessel's ISPS and Ship Security Plan

The student must acquire the necessary **competencies** to:

- Write Masters' reviews
- Issue bills of lading on behalf of the shipowner and charterer
- Communicate correctly with external and internal entities on matters of legal and administrative matters

Safety and Quality Shipping (including paragraph 16) - BS3 (16141):

The student must attain **knowledge** of:

- ISM Code and its importance in establishing safe shipboard operations
- Quality assurance through the ISM Code
- Key Performance Indicators and performance monitoring
- Vetting and commercial inspections
- General knowledge about how occupational health can form part of safety management system including procedures for securing on-board health and safety
- Understand the most important occupational health effect on passenger and cargo ships, including the most important work related diseases and occupational accidents.
- Understand the most important tasks performed by the safety organization.
- Developing the attitude of the safety organization towards promoting a safe working environment.
- Causes of vocational accidents and preventative measures taken to avoid them
- Developing the attitude of the safety organization towards promoting a safe working environment
- Accident and average investigations
- Accident reporting and route cause analysis
- Safety enhancing tools and measures the purpose of which is to promote safe operations Safe working practices in polar regions

The student must attain the **skills** necessary to:

- Complete non-conformance, near miss and deficiency reports
- Participate in vessel inspections at junior officer level decide upon and implement appropriate corrective actions based on audit results
- Use the ISM Code as a quality management tool in daily work and to communicate its content to the crew in an effective and understandable manner.
- Assess the effectiveness of the ISM system regarding safety, health and environmental protection as a tool for ensuring a safe working environment
- Instruct and monitor safe working practices to ensure that the work is conducted with due regard to the risk of accidents and the danger to health
- Be responsible for toolbox meetings, risk assessments, and workplace assessments
- Show responsibility and commitment in promoting the working environmental effort on board
- Update the safety organization's knowledge by retrieving information from acts, new safety regulations, material from relevant occupational health services and preventive measures.
- Issue deficiencies and non-conformances based upon observations of non-adherence with the SMS
- Conduct internal audits of the ship's Safety Management System

The student must acquire the necessary **competencies** to:

- Complete work accident reporting forms
- Assist in vessel inspections and audits
- Complete non-conformance and near miss reporting
- Performance of tasks in the safety organization including consultancy in connection with the solving of occupational health problems in order to prevent and handle occupational health related conflicts.

- Cooperation at all operational levels with a view to securing on-board occupational health.
- Assess the need for further training regarding the ISM code and the use of an SMS system

Methodology

Methodology I - BS3 (16210):

The student must attain **knowledge** of:

- Study techniques and group work
- Basic information gathering
- Scientific writing
- Deductive and inductive methods of research

The student must attain the **skills** necessary to:

- Make use of the Open Learning Center and its facilities
- Prepare a correct reference list
- Put emphasis on the student's ability to formulate and spell
- Communicate in a professional language
- Take a critical position on sources of information
- Produce a paper in accordance with set requirements
- Produce a paper that is well-structured, well-balanced and meaningful in terms of content and style

The student must acquire the necessary **competencies** to

- Write a paper in accordance with academic standards

Methodology II - BS4 (16220):

The student must attain **knowledge** of

- Academic standards
- Basic problem oriented project work
- Problem statement
- Collecting information
- Data retrieval from questionnaires
- Toulmin's model of argumentation
- Basic theory of science i.e. social sciences and the humanities, as opposed to the natural science
- Research designs

The student must attain the **skills** necessary to

- Acquire and apply knowledge in quantitative research
- Conduct a good argumentation
- Testing hypothesis
- Be able to utilize basic theory of science in research
- Understand reliability and validity in quantitative research

The student must acquire the necessary **competencies** to

- Work problem orientated
- Take a critical position on data and data retrieval
- Analyze and assess data from quantitative research

Methodology III – BS5 (16230):

The student must attain **knowledge** of

- Advanced information acquisition
- Qualitative research methods
- Writing accurate qualitative research questions
- Classic theory of science
- Research designs
- Types of mixed method designs
- Method used to generate data in qualitative research
- The research Pentagon

The student must attain the **skills** necessary to

- Reflect on methods and sources
- Take a critical stance on choice and use of methods and sources
- Search for information in library catalogues, databases and on the internet
- Acquire and apply knowledge in research
- Select, argue for and structure a precise and relevant problem within the field of their profession
- Generate data in qualitative research
- Understand reliability and validity in qualitative research
- Design and conducting mixed research designs
- Understand the concept of triangulation of data

The student must acquire the necessary **competencies** to

- Conduct research in accordance with scientific methods and standards
- Disseminate professional issues
- Discuss methods and findings with professionals
- Utilize empirical data and scientific methods
- Identify the process for writing meaningful research questions
- Analyze and assess data from qualitative research
- Take a critical position on data and information gathered

Leadership, Organization and Economics

Maritime Economics – BS5 (16311):

The student must attain **knowledge** of:

- The market situation of a company
- The concept of sale, supply and demand and be able to account for those
- Market types – and be able to account for the different models
- The concepts of turnover - cost and the different types of cost
- The concept of budgets
- The concept of balance and financial result

The student must attain the **skills** necessary to:

- The most important types of cost in managing a company or a ship
- How to minimize costs
- The financial situation of a company or a ship.

- The situation of the maritime economy and market situation

The student must acquire the necessary **competencies** to:

- calculating financial key figures on basis of financial results
- making simple analysis of company's financial situation
- drawing up simple balance sheets and financial results
- combining knowledge on economic conditions with practical problems and solutions
- finding relevant information in order to make simple market analysis

Human Resource Management – BS7 (16332)

The student must attain **knowledge** of:

- Theories of motivation
- Management styles and models
- Strategic management
- Communication theory
- Conflict management
- Personality traits and tests
- Cultural theories
- Stress symptoms, causes and stress management

The student must attain the **skills** necessary to:

- Perform leadership in a multinational environment
- Communicate in a manner appropriate to the individuals concerned
- Manage conflicts
- Identify stress symptoms
- Ensure a satisfactory work environment
- Identify and understand organizational processes
- Understand an organization's strategy

The student must acquire the necessary **competencies** to:

- Demonstrate effective leadership behaviors
- Communicate effectively
- Create and maintain good work relationships

Standard Based Tools – BS5 (16341):

The student must attain **knowledge** of:

- Basic principles for standard based tools such as ISO 14001, ISO 9001, Danish Environmental Law, Marine environmental Law, SEEMP, EEDI and occupational Health and Safety.
- Quality assurance principles and auditing
- Basic quality assurance methods and auditing: plan-do-check-act principle
- GAP analysis
- Environmental management planning and audits at management level
- Common concepts of maintenance.

- Methods used in testing materials in a non-destructive manner.
- Maintenance standard requirements made by external interests, including class, insurance companies and authorities.
- Common causes of vibrations in rotating machinery and common causes of hull vibrations

The student must attain the **skills** necessary to:

- Integrate occupational Health, Safety, Quality and Environmental management systems into the strategies of an organization
- Through reviews, identify areas for improvement and change within the quality assurance systems
- Implement changes and improvements within the quality assurance systems
- Apply maintenance management tools, including electronic maintenance control programs.
- Apply specific Non Destructive testing NDE- methods.

The student must acquire the necessary **competencies** to:

- Assist with coordinating Health, Safety and Environmental management
- Select the best-suited maintenance tools

Master Module – BS4 (16400)

Shipping and Chartering:

The student must attain **knowledge** of:

- The role of the owner, carrier, charterer, operator and broker in a chartering perspective
- Chartering categories and hybrids
- Chartering documents, Statements of Facts, NOR, Bills of Lading, etc.
- Standard BIMCO contracts of carriage for voyage and time charters
- The role of the Bill of Lading
- Chartering abbreviations
- Chartering contract negotiations

The student must attain the **skills** necessary to:

- Read and understand the content of standard charter parties at ship officers' level
Understand the implications of standard abbreviations regarding laytime and demurrage

The student must acquire the necessary **competencies** to:

- None

Negotiating Skills:

The student must attain **knowledge** of:

- Your values and how they impact on your negotiations
- Understanding the nature of the gap between you and the other party
- Styles of negotiators
- Win:win negotiations
- Preparing for a negotiation and setting objectives
- Finding out as much as you can about the other party's needs and aspirations
- Developing a strategy for success
- Framing

The student must attain the **skills** necessary to:

- Listening skills
- Assertiveness - how to be assertive, but not aggressive, in negotiations
- Questioning skills
- Finding imaginative solutions to objections
- Summarising and synthesising skills

The student must acquire the necessary **competencies** to:

- Open a negotiation
- Conduct a negotiation
- Handle objections
- Question

Docking:

The student must attain **knowledge** of:

- Ship plans including general arrangement, docking plan etc.
- Administrative aspects of docking including sharing of responsibility and accountability during docking with the ship yard and sub-contractors
- Coordination of docking with flag state administration, classification societies, technical inspectors, insurance companies and other parties during docking

The student must attain the **skills** necessary to:

- Plan scheduled vessel docking
- Fulfill a docking specification
- Conduct hull inspections
- Supervise maintenance work
- Communication with sub-contractors and ship yards
- Apply safe working practices

The student must acquire the necessary **competencies** to:

- Negotiate docking and subcontractor-bills in conjunction with competencies obtained in negotiating skills part-course

Maritime Economics:

The student must attain **knowledge** of:

- The organization of the Shipping Market
- Demand of sea transport
- Commodities shipped
- Sea transport system
- The merchant fleet
- The cost of sea transport
- The shipping companies
- Characteristics of shipping market cycles
- Demand and supply
- The momentary, short and long term freight rate mechanism
- Key shipping Indexes
- The freight market, the sale and purchase market, the demolition market and the new building market

The student must attain the **skills** necessary to:

- Understand key shipping indexes'
- Identify whether a particular market is weak or strong based upon shipping newsletters
- Link world events into a shipping context

The student must acquire the necessary **competencies** to:

- None

Examination

Maritime Law and Ship Administration I - BS3 (MLSA I - 16111):

Examination type:	Ongoing assessment
Grade scale:	7-point scale
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	Maritime Law and Ship Administration I in BS3 and Safety and Quality Shipping in BS3 are examined together.
Prerequisites for examination:	None

Maritime Law and Ship Administration II - BS4 (MLSA II - 16121):

Examination type:	Internal written test
Grade scale:	7-point scale
Preparation time:	None
Duration:	1½ hours
Aids allowed:	All
Important Information:	None
Prerequisites for examination:	None

Maritime Law and Ship Administration III - BS7 (MLSA III – (16132):

Examination type:	External oral exam
Grade scale:	7-point scale
Preparation time:	24 hours
Duration:	30 minutes
Aids allowed:	None
Important Information:	Each student is randomly assigned a problem scenario by WiseFlow or the Study Services. The student prepares a 15-minute presentation of his/her conclusion. Subsequently the student will be randomly examined at master level in areas of the subject syllabus for the remainder of the examination.
Prerequisites for examination:	None
Prerequisites for examination:	See examination of MLSA II

Safety and Quality Shipping - BS3 (SQS – 16141):

Examination type:	See examination of MLSA I (16111)
Grade scale:	See examination of MLSA I (16111)
Preparation time:	See examination of MLSA I (16111)
Duration:	See examination of MLSA I (16111)
Aids allowed:	See examination of MLSA I (16111)
Important Information:	Maritime Law and Ship Administration I in BS3 and Safety and Quality Shipping in BS3 are examined together. See examination of MLSA I (16111)
Prerequisites for examination:	None

§16. Safety and Health Working Environment - BS3 (16150):

Examination type:	Ongoing assessment
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	None
Prerequisites for examination:	Compulsory attendance for all courses related activities

Ship Security at SSO level - BS4 (16160):

Examination type:	Ongoing assessment
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	None
Prerequisites for examination:	None

Methodology I - BS3 (16210):

Examination type:	Ongoing assessment
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	N/A
Aids allowed:::	N/A
Important Information:	None
Prerequisites for examination:	None

Methodology II - BS4 (16220):

Examination type:	Ongoing assessment
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	None
Prerequisites for examination:	None

Methodology III - BS5 (16230):

Examination type:	Ongoing assessment
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	None
Prerequisites for examination:	None

Maritime Economics – BS5 (16311):

Examination type:	Ongoing assessment
Grade scale:	7 point scale
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	None
Prerequisites for examination:	None

Human Resource Management - BS7 (16332):

Examination type:	External oral exam
Grade scale:	7 point scale
Preparation time:	None
Duration:	30 minutes
Aids allowed:	All
Important Information:	At the beginning of the exam, each student draws a topic from a list of topics based on a case scenario, all known to the students as described in the lesson plan. For the first 10 minutes, the student addresses the topic. Subsequently, the student will be examined in other learning objectives of this subject
Prerequisites for examination:	None

Standard Based Tools - BS5 (16341):

Examination type:	External oral exam
Grade scale:	7 point scale
Preparation time:	None
Duration:	20 minutes
Aids allowed:	All
Important Information:	At the beginning of the semester, the students receive a case scenario as described in the lesson plan. The student must hand in a case scenario report in accordance with the lesson plan. The examination is based on this case scenario report handed in by the student.

Prerequisites for examination:	None
--------------------------------	------

Master Module - BS4 (16400):

Examination type:	Ongoing assessment
Grade scale:	7-point scale
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	None
Prerequisites for examination:	None

Qualification prerequisites for professors/instructors etc.

Associate professors or assistant professors intended to be used in qualifying for certification under the STCW convention of 1978 as amended shall:

- have a qualification level that is the same or higher than the level of learning objectives for the subject
and
- have a full understanding of the subject-training programme and the specified objectives for each type of training being conducted.

In accordance with the Danish order no. 765 of 22 June 2017 the instructor of §16 safety and health working environment courses shall have completed a training programme for teachers of working environment approved by the Danish Maritime Authority.

Purpose

The purpose of the project is for the student to achieve competencies that contribute to the management of complex and development-oriented problems within the field of his or her profession.

By drawing correlations between experience, practical skills and theoretical knowledge, the student must be able to identify, analyze and solve a specific problem, which is central and within the field of his or her profession.

The student must demonstrate the skills of independent and efficient learning by showing insight into an issue or problem, having acquired up-to-date knowledge about theories, methods, and practice that is relevant and knowledge generation within the subject area of the problem.

Through this process, the student must acquire skills in applying the knowledge previously learnt: setting up a problem statement with clear aims, use of relevant theory, systematic collation of data, and analysis and evaluation of the generated data, taking into consideration any theories relevant to the analysis, and finally stating important conclusions and recommendations.

Learning objectives

Bachelor Project - BS8 (19111, 19112, 19113 & 19114)

The student must attain **knowledge** of:

- The scientific research method and scientific theory

The student must attain the **skills** necessary to:

- Select, argue for and structure a precise and relevant problem within the field of his or her profession.
- Search for, read, and in an appropriate way, account for and apply scientifically based knowledge relevant to the selected problem. The process will enable the student to participate and take part in any scientific study.

The student must acquire the necessary **competencies** to:

- Provide and analyze relevant information and data by means of appropriate usage of relevant techniques, procedures and methods suitable to the relevant area. This may be techniques, procedures and methods acquired previously in the study program or they may be newly acquired.
- Critically evaluate a project in terms of the scientific method used, and the scientific results.
- Prepare a written report, which seems to the reader to be structured, well-balanced and meaningful in terms of content, language, as well as style.
- Present the project and be able to discuss the results and perspectives with relevant stakeholders

BA Methodology Course – BS8 (19121, 19122, 19123 & 19124)

The student must attain **knowledge** of:

- Define and formulate research problems and questions and, where appropriate, formulate hypotheses that can be tested
- Understand the use of, and be able to use, a range of methods and be able to decide on appropriate research designs and methods to investigate a research problem

- Understand the relationships between, and the rationale for using, particular qualitative and quantitative research methods
- Understand and master systematic critical thinking associated with argumentative writing
- Demonstrate and organize correct references
- Know how to write abstracts in the correct form and detail

The student must attain the **skills** necessary to:

- Design a feasible research study
- Determine relevant, logical and accurate research questions, study objectives and select appropriate research method(s)
- Plan, collect, manage and analyze qualitative and/or quantitative related research data and materials
- Select, analyze and structure a problem that is relevant for any research project
- Undertake a reasoned choice of methods for solving the problem, and reflect on the implications of the choices taken.

The student must acquire the necessary **competencies** to:

- Differentiate between various research study designs and methods
- Carry out a scientifically valid research project
- Work with different types of approach towards analyzing qualitative and quantitative data
- Write a good abstract in English

Core literature

None

Examination

Bachelor Project - BS8 (19111, 19112, 19113 & 19114):

Examination type: External, Oral Exam

Grade scale: 7-point scale

Preparation time: None

Duration: 1 hour

Aids allowed: All

Important Information: **Language:**

- The project can be written in either English or Danish, and evaluated in the language of the student's choice.
- The examination will be carried out in either English or Danish. The student must notify the student administration if the project and the examination will be held in English. Notice is given when handing in the preliminary problem statement.
- The ability to formulate and spell is an integral part of the assessment of the academic content.

Examination:

- The student starts the examination with a 15 minutes' presentation.

Before examination:

- The BA methodology course must be passed before handing in the preliminary problem statement.
- The preliminary problem statement must be handed in no later than 2 weeks after commencing the project period in accordance with the lesson plan
- The final problem statement must be approved by the supervisor and handed in/uploaded as described in the lesson plan no later than 3 weeks before the deadline set for the final hand-in of actual project.

After examination:

- Students resitting the exam do not need to hand in a preliminary problem statement or a final problem statement, provided it has been approved by the supervisor for re-examination.

Prerequisites for Examination

All other subjects and Professional Work Experience of the BS education programme must be passed in accordance with the course regulations for Master Mariner.
The bachelor project must be handed-in on time in accordance with the lesson plan.

BA Methodology Course - BS8 (19121, 19122, 19123 & 19124):

Examination type:	Ongoing assessment
Grade scale:	Passed or Not Passed
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	The students must attend <u>all lessons</u> in the BA methodology course in order to pass it.
Prerequisites for Examination	None

Qualification prerequisites for professors/instructors etc.

Associate professors intended to be used in qualifying for certification under the STCW convention of 1978 as amended shall:

- have a qualification level that is higher than the level of learning objectives for the subject and
- have a full understanding of the subject-training programme and the specified objectives for each type of training being conducted.
- Assistant professors can act as bachelor supervisors when they are on the final part of their master's degree.

Purpose

The objective of this course is to qualify the student to understand and use different optimizing- and management tools. Upon completion of the course, the student will gain the necessary knowledge, understanding, skills and competences to optimize workflows onboard and ashore.

Learning objectives

Operational Optimization and Management Tools (88105):

Knowledge:

- Management tools as LEAN, JIT, SIX SIGMA and KAIZEN.
- Operational optimization influence on organization and economy.

Skills:

- None

Competencies:

- Implement and use management tools to improve the organization's work environment, safety and economy

Purpose

This Change Management course will enable students to understand how they can carry out and implement any change in an organization, successfully. This course covers the basic theory within the change management theory. The course will give an introduction to different perspectives connected to organizational change. The main focus will be on change as a planned and managed process. Furthermore, there will be a discussion on the driving forces of change and how these - and their interpretations - may create different change processes.

Learning objectives

Change Management – BS5+BM8+BJ6+SE (88108)

Knowledge:

- How changes are initiated in organizations
- Different types of change
- The role and competences of change agents
- Management in organizations in change
- Organizational design and culture in relation to organizational change
- Communication process
- The role of leadership in planned change

Skills:

- Analyze a given organization and suggest changes
- Analyze and understand the basic aspects of organizational change; driving forces, content and context and process
- Understand the role of leadership in planned change processes, both possibilities and
- Work-out and implement a suitable strategy
- Finding innovative solutions to organizational change
- Understand the resistance in the organisation
- Understand how different cultures operate
- Identifying Change Agents

Syllabus

Competencies:

- Work with different perspectives on organizational change, and how these perspectives relate to planned change
- Handle the basic strategies of change, and knowing under what contingencies they will work
- Handle the role of leadership in planned change processes, both possibilities and limitations
- Critically assess the possibility of planned change in different contexts.

Purpose

This negotiating skills course will enable students to understand how they can negotiate constructively with principals, colleagues, suppliers and contact negotiations and be able to carry out a negotiation, which creates a win-win outcome for all parties. This course covers all the basics of negotiating in a practical and interactive way.

Learning objectives

Negotiating Skills (88109):

Knowledge:

- Your values and how they impact on your negotiations.
- Understanding the nature of the gap between you and the other party.
- Styles and negotiators.
- Understand the structure underlying all negotiations.
- Identify the appropriate skills used in negotiations.
- Creating win-win negotiations.
- Preparing for a negotiation and setting objectives.
- Finding out as much as you can about the other party's needs and aspirations.
- Developing a strategy for success.
- Framing.
- Recognizing and dealing with 'underhand' tactics and manipulation.
- The importance of establishing a productive environment.
- Cross-cultural negotiations – understanding and dealing with different cultures.
- Understanding the meaning and importance of body language.
- Understanding the communication process.

Skills:

- Listening skills.
- Assertiveness - how to be assertive, but not aggressive, in negotiations.
- Questioning skills.
- Finding innovative solutions to objections.
- Summarizing and synthesizing skills.

Competencies:

- Open a negotiation.
- Conduct a negotiation both in English and in Danish.
- Handle objections.
- Question his or her negotiating partner.

Core literature

Forhandlingsteknik i teori og praksis af Anne Bay Nordtorp.

Purpose

The student will obtain knowledge, skills, and competences for planning, carrying out, and reflecting on the communication of a message by various means.

Learning objectives

Communication Skills (88110):

Knowledge:

- The basic terms of communication.
- The background of the participants/receivers.
- The effects of various means of communicating a message and the interaction between the sender and receiver of a message.

Skills:

- Plan and carry out the communication of a message by various means and to various target audiences.
- Choose the method to communicate a message.
- Use common technical means to communicate or present a message (e.g. presentation software, A/V equipment).

Competencies:

- Reflect on a communication course carried out.
- Estimate which means of communication would be appropriate in a given situation.
- Suggest adjustments based on the evaluation of a communication course.

Purpose

The objective of this course is to qualify the student to understand and use generally project management tools. Upon completion of the course, the student will have ability and knowledge of the process and activity of planning, organizing, motivating, and controlling resources and procedures to achieve specific goals.

Learning objectives

Project management (88120):

Knowledge:

- Basic phases of Project management.
- Methods to achieve specific and measurable goals.
- Management planning and schedule tools like the Gantt chart.
- Roles in Project Management (project manager, project team, project owner).

Skills:

- Deal with scope, time, quality and budget of a project.
- Participate in a project team.

Competencies:

- Achieve the project goals and objectives.

Purpose

§ 5, Crisis management and crowd control (human behaviour):

The purpose of this part of the optional course is to let the student as ships officers or as responsible for the safety of passengers acquire the knowledge, skills and competences to handle the safety of passengers on board passenger ships in adverse and emergency situations.

§ 7, Training in organization and execution of lifeboat and fire drills:

The purpose of this part of the optional is to let the student acquire the knowledge, skills and competence to enhance the management of fire and boat drills including evacuation of passengers on board passenger ships.

Learning objectives

Pax-RoRo:

§5, Crisis management and crowd control (human behavior) (88122-1):

Knowledge:

- Emergency plans and procedures
- Leadership skills and stress handling
- Human behavior and responses
- The importance of clear and concise instructions and reports

Skills:

- Initial assessment of and providing an effective response to emergency situations in accordance with the established emergency procedures
- Ability to lead and direct others in emergency situations
- Ability to identify the development of symptoms of excessive personal stress
- Awareness of the general reaction patterns of people in emergency situations
- Ability to provide relevant information in emergency situations

Competencies:

- Organize shipboard emergency procedures
- Optimize the use of resources
- Control response to emergencies
- Control passengers and other personnel during emergency situations
- Establish and maintain effective communications

§7, Training in organization and execution of lifeboat and fire drills (88222-2):

Knowledge:

- Appropriate safety regulations concerning passenger ships' fire safety, evacuation and use of life saving appliances
- Importance of a common understanding regarding the importance of a thorough preparation and planning of all required drills
- Planning, preparation, execution and evaluation of fire fighting and evacuation drills

Skills:

- Include crisis management and crowd control into fire fighting and evacuation drills
- Heighten safety awareness when conducting fire fighting and safety drills.
- Enhance cooperation between the different personnel groups
- Motivation of personnel in conjunction with execution of drills
- Involvement of leading personnel in when planning, executing and evaluating drills

Competencies:

- Planning of fire fighting and evacuation drills
- Execution of fire fighting and evacuation drills
- Evaluation of fire fighting and evacuation drills

Purpose

The objective of Shipping and Chartering is to qualify the student to fulfill the commercial obligations of a ship and shipowner when fixed on a charter party with due regard to securing the interests of his principals. These include the contractual terms of international commerce which affect the charter party and the shipments of cargo.

The participants will acquire a sound comprehension of shipping trade mechanisms, shipping market cycles, the freight, sale and purchase, newbuilding and demolition markets and ships' employment enabling them to comprehend the ship operator's choice of vessels employment. All lectures and course material will be presented in English.

Learning objectives

Shipping and chartering (88125):

Knowledge:

- The role of the owner, carrier, charterer, operator and broker in a chartering perspective.
- Chartering categories and hybrids.
- Contracts of carriage/affreightment and incorporated clauses.
- Choice of legal forum in chartering agreements.
- Deviation and liberty clauses.
- Documentary Credit System.
- Chartering abbreviations.
- The organization of the Shipping Market.
- Bunker strategy.
- Characteristics of shipping market cycles.
- Supply and Demand.
- Immediate, short and long term freight rate mechanisms.
- Key shipping indexes'.
- The freight market, the sale and purchase market, the demolition market and the new building market.

Skills:

- Understand chartering contract negotiations.
- Read and understand the content of standard charter parties.
- Understand the implications of standard abbreviations regarding laytime and demurrage.
- Understand key shipping indexes'.
- Identify whether a particular market is weak or strong based upon shipping newsletters.
- Link world events into a shipping context.

Competencies:

- Compute laytime and demurrage against a charter party.
- Issue letters of protest.

Core literature

Core literature for this course will be provided by the responsible lecturer.

Examination

Shipping and chartering (88125):

Examination type:	Ongoing assessment
Grading scale:	Passed or Not Passed
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	Course participants may also pass this course by completing a 3 days internship at an approved shipping office. This must be approved by the course lecturer prior to commencement.
Prerequisites for Examination:	None

Purpose

To enable the student to work as a Ships Officer or Master Engineer with a competence and ability in English so he/she can compete for jobs on sea or on land, conduct business in an international working environment, and carry out research and other enquiries in the maritime merchant sector.

Learning objectives

Advanced English (88129):

Knowledge:

- The language and vocabulary of job applications and interviews, human resources, qualifications and relevant personal experience.
- The language of technical reports, ordering supplies, communications with ship owners and charterers, and maintaining efficiency onboard.
- The language of environmental protection, emissions and the latest developments in these fields.
- The language of negotiating, diplomacy, and managing cultural differences.
- The language of planning, meetings, decision making and teamwork.
- Appropriate English for projects, surveys and research into maritime topics.

Skills:

- Write job applications and Curriculum Vitae to international companies.
- Conduct him/herself well in job interviews.
- Write letters and reports in relation to his job of Master or Chief Engineer.
- Analyze, advise and report on ship efficiency and environmental protection matters in English.
- Negotiate and use diplomacy in English when dealing with people of all ranks.
- Organize his/her own work and those of others in English.
- Carry out maritime research and surveys, and be familiar with project methodology language, in English.

Competencies:

- Act and speak with confidence in the modern international merchant shipping world.
- Communicate in writing to all major stakeholders.
- Complete research or projects in English which should be of a sufficient level to be published.

Purpose

The student should obtain skills, knowledge and competences in order to understand and work with the fundamental focus areas of Innovation and Entrepreneurship.

Learning objectives

Innovation and Entrepreneurship – Module I & II (88130):

Both module I and module II are based on student ideas and projects – therefore the precise content and perspectives are variable.

Both in module I and module II, the students are encouraged to participate in “Start-Up-Programme” by “FFE-YE”

Module I:

Knowledge:

- Idea generating. Idea generating techniques and methods.
- The fundamental parts of an innovation process
- The principles of effectual entrepreneurship

Skills:

- Identify market needs and perspectives
- Idea screening and development
- Simple idea descriptions and prototyping
- Oral and written pitching

Competencies:

- None

Module II:

Knowledge:

- Basic elements of a business plan
- Content of “Business Model Canvas”
- Basic Business Models

Syllabus

Skills:

- Strategic business development
- Causation and effectuation principles
- Evaluation of business ideas and models.
- Oral presentation

Competencies:

- Written Business Plan and presentation

Certificate(s):	<p><u>Course Certificate in advanced training for service on Ships operating in Polar Waters</u> is issued upon completion of the training programme prescribed in Regulation V/4, paragraph 4 of the STCW Convention of 1978, as amended and the Danish order on training programme and certificates for service on ships operating in Polar Waters – order no 762 of 11 June 2018, as amended..</p> <p>The Academy may issue a <u>Certificate of Proficiency in advanced training for service on Ships operating in Polar Waters</u>, when basic training for service on Ships operating in</p>		

	Polar waters is passed and at least 2 months relevant seagoing service in polar waters is proved.	
Responsible:	Subject Manager	
Valid from:	2020-1	VTA
Expired:		
Remarks:	None	

Purpose

The purpose of Advanced Polar Code Training is for the student to gain the necessary knowledge, skills and competencies to perform the duties as master on board ships operation in polar waters in an efficient and safe manner whilst observing good seamanship.

Learning objectives

Advanced Polar Code Training (88135):

The student must obtain **knowledge** of:

- Reporting regimes in polar waters
- hazards associated with limited terrestrial navigational aids in polar regions;
- high latitude errors on compasses
- Understand icebreaker convoy terminology, and communications, and take icebreaker direction and move in convoy
- knowledge of different type of propulsion and rudder systems, including limitations to avoid damage when operating in ice;
- the use of heeling and trim-systems.; hazards in connection with ballast and trim in relation with ice

The student must acquire the **skills** necessary to:

- recognize the limitations of hydrographic information and charts in polar regions and whether the information is suitable for safe navigation
- perform passage planning deviation and modification for dynamic ice conditions
- identify limitations in discrimination of radar targets and ice-features in ice clutter
- Understand and recognize limitations of electronic positioning systems at high latitude
- Understand and recognize limitations in nautical charts and pilot descriptions
- Understand and recognize limitations in communication systems
- Prepare and conduct risk assessment before approaching ice including presence of icebergs, and taking into account wind, darkness, swell, fog and pressure ice
- Conduct communications with an icebreaker and other vessels in the area and with Rescue Coordination Centers

- Understand and describe the conditions for the safe entry and exit to and from ice or open water, such as leads or cracks, avoiding icebergs and dangerous ice conditions and maintaining safe distance to icebergs
- Understand and describe ice ramming procedures – including double and single ramming passage
- Recognize and determine the need for bridge watch team augmentation based upon environmental conditions, vessel equipment and vessel ice class
- Recognize the presentations of the various ice conditions as they appear on radar
- Understand methods to avoid besetment and to free beset vessel, and consequences of besetment
- Understand towing and rescue in ice, including risks associated with operation;
- Recognize conditions, which impact polar visibility and may give indication of local ice and water conditions, including sea smoke, blink and refraction.
- Understand the procedures and techniques for abandoning the ship and survival on the ice and in ice-covered waters
- Recognize limitations on fire-fighting systems and lifesaving appliances due to low air temperatures
- Understand unique concerns in conducting emergency drills in ice and low temperatures;
- Understand unique concerns in conducting emergency response in ice and low air and water temperatures

The student must acquire the **Competencies** necessary to:

- Develop a safe routing and passage planning to avoid ice where possible
- Handle the ship in various ice concentration and coverage, including risks associated with navigation in ice, and turning backing; avoidance; etc.
- Perform docking and undocking in ice covered waters, including hazards associated with operation and the various techniques to safely and undock in ice covered waters
- Anchoring in ice, including the dangers to anchoring system – ice accretion to hawse pipe and ground tackle

Examination

Advanced Polar Code Training (88135):

Examination type:	Ongoing assessment
Grading scale:	Passed or not passed
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	None
Prerequisites for Examination:	None

Qualification prerequisites for professors/instructors etc.

Associate professors or assistant professors intended to be used in qualifying for certification under the STCW convention of 1978 as amended shall:

- have a qualification level that is the same or higher than the level of learning objectives for the subject
and
- have a full understanding of the subject-training programme and the specified objectives for each type of training being conducted.

If conducting training using a simulator the instructor shall:

- have received appropriate guidance in instructional techniques involving the use of the simulator
and
- have gained practical operational experience on the particular type of simulator being used

Purpose

The purpose of the course is for the student to acquire knowledge of energy efficient ship operation, to obtain awareness and develop the skills to actively eco-drive available machinery and equipment under the prevailing conditions taking into account commercial aspects, regulation and safety.

Learning objectives

Energy Efficient Ship Operation (88141):

Knowledge:

- Ship energy efficient management and operation
- Energy optimization of ships – equipment, design, operation and maintenance
- Performance systems
- Data types, logged, manually collected and noon report
- Data collection, measurements and uncertainties
- Regulation EEDI, EEIO, SEEMP, IMO fuel data collection system and the EU MRV directive

Skills:

- Obtain and maintain awareness of energy efficient operation
- Interpretation of measured data from fuel consumption and running equipment
- Optimize performance based on performance data

Competencies:

- Handling complex situations balancing safety, time and energy efficiency
- Reflection on actions taken in balancing different or conflicting objectives
- Plan, perform and evaluate tests on board
- Ability to communicate and document the results of tests

Purpose

The purpose of this subject is to give the students an understanding of how to start a company. This subject will present methods and concepts that will help the student to select relevant assets and competencies and to develop strategies in branding, advertising, distribution, manufacturing and finance.

Learning objectives

How to Start a Business and Private Legislation (88142):

Knowledge:

- The 4 P's
- Industry and competitor analysis
- Consumer analysis and behavior
- Consumer in the marketplace
- Market analysis
- Environmental analysis
- Cost analysis
- Basic principles of commercial law
- Contracts when buying or selling

Skills:

- Develop an outline of a business plan for a new concept or business idea and analyze the same
- Asses the profitability and risk of a business model, including legal issues
- Understand the Contracts Act
- Understand the principles behind the Sale of Goods and Supply of Services Act (the Danish Sale of Goods Act)
- Understand the principles of liability law
- Apply knowledge of the Construction Act and AB92
- Apply knowledge of national and international private law
- Understand the principles behind insurance

Competencies:

- Evaluate the business value and feasibility of a new business idea or concept
- Prepare an outline of an implementation plan on how to start a new business based on a given business model

Purpose

The purpose of this subject is to give the students an understanding of the globalization process. This subject will equip the students with some knowledge of the happenings in the field of economy, finance, culture and politics – with an emphasis on market and consumer behavior.

Learning objectives

Globalization (88143):

Knowledge:

- Globalization and the new global economy
- Continuity and change in the world economy since the 1970s
- Regional and multilateral agreements
- The field of economy, finance, culture and politics
- The development of new markets
- Consumer behavior and how it affects international trade and shipping
- Techniques on how to spot market opportunities
- The consequences of outsourcing

Skills:

- Understand the globalization process
- Understand the mechanism of international economic connections through which it works and an idea of some of the debates it has evoked
- Analyze market opportunities
- Reflect on how the maritime industry can explore market opportunities
- Reflect on different scenarios raised

Competencies:

- Critically evaluate and assess a market
- Critically evaluate global transformation

Purpose

The purpose of the course is to let the participant acquire knowledge, skills and competences in operating offshore support vessels.

Learning objectives

Knowledge:

- Offshore Support Vessel types, common general arrangements and configurations
- Maneuvering and propulsive set-up and characteristics
- Introduction to Dynamic Positioning equipment and systems
- Legislative background for Offshore Supply Vessels (OSV) and Special Purpose Ships (SPS) vessels incl. IMO requirements in resolution MSC.415(97) for heavy lift at sea, anchor handling and towage
- Class requirements for crane operations and heavy lift at sea
- Anchor handling operations
- Subsea construction and ROV operations
- Ship-to ship and Ship-to-platform operations
- Towing operations
- Risk Assessment in offshore support operations
- 500m zone(bridging documents/permits for entry/precautions/risks/emergencies)

Skills:

- Utilize stability instruments to ensure safe heavy lift operations at sea

Competencies:

- Ship handling maneuvers:
 - Man over board from platform
 - Towage of another vessel
 - Ship to ship berthing
- Utilizing different maneuvering set-ups:
 - Twin propeller and thruster both ends
 - Twin Azimuth

Purpose

The overall purpose is to enhance safety of chemical and oil tanker cargo operations on board chemical and oil tankers and thereby reducing the risk of injuries or death to crewmembers and preventing damage to the ship, the cargo and the environment. The course will provide the student the knowledge, skills and competences to safely perform and monitor cargo operations taking cargo hazards into account in relation to occupational health and safety and the environment in compliance with legislative requirements.

Learning objectives

Advanced Training for Oil and Chemical Tanker Cargo Operations (88145):

Knowledge:

- Chemical and oil tanker design, cargo systems and equipment including:
 - Chemical and oil tanker
 - General arrangement and construction
 - Pumping arrangement and equipment
 - Slop management
 - Ballast systems
 - Fire-fighting systems
 - Cargo area venting and accommodation ventilation
 - Vapour recovery systems
 - Chemical tanker specifically
 - Tank construction and arrangement
 - Pipeline and drainage systems
 - Tank and cargo pipeline pressure and temperature control systems and alarms
 - Gas detection equipment
 - Cargo heating and cooling systems
 - Tank cleaning system
 - Cargo tank environment control
 - Tank, pipeline and fittings' material and coating
 - Oil tanker specifically
 - Tank arrangement, pipe system and tank venting arrangement
 - Gauging control systems and alarms
 - Cargo heating systems
 - Tank cleaning, gasfreeing and inerting systems
 - Electric and electronic cargo control systems
 - Environmental protection equipment incl. ODME
 - Cargo pressure and temperature control systems
 - Pump theory, different types of pumps and their operation
 - Tanker safety culture and SMS
 - Monitoring and safety systems including ESD
 - Monitoring procedures and safety systems initiating immediate action according to procedures for chemical tankers
- Loading, unloading, care and handling of cargo including:
 - The cargo's effect on trim, stability and structural integrity
 - Loading and unloading plans

Syllabus

- Ballast and deballasting
- Tank cleaning operations
- Tank atmosphere control, inerting and gasfreeing
- Specifically for oil tankers
 - COW
 - Load on Top
 - Ship to ship transfer
- Specifically for chemical tankers
 - Inhibition and stabilization requirements
 - Heating and cooling requirements and consequences to adjacent cargo
 - Cargo compatibility and segregation
 - High-viscosity cargoes
 - Cargo residue operations
 - Operational tank entry
- Physical and chemical properties of noxious liquid and oil cargoes including the MSDS chemical cargo information and:
 - Chemical cargoes categories (corrosive, toxic, flammable and explosive)
 - Chemical groups and industrial usage
 - Reactivity of cargoes
- Hazards and the appropriate precautions to counter these during cargo operations including:
 - Flammability and explosion
 - Toxicity
 - Health hazards
 - Inert gas composition
 - Electrostatic hazards
 - Reactivity
 - Corrosively
 - Low boiling point cargoes
 - High density cargoes
 - Solidifying cargoes
 - Polymerizing cargoes
 - Dangers of non-compliance with relevant rules and regulations
- Occupational health and safety including:
 - Safe work practices
 - Precautions when entering enclosed spaces
 - Repair work precautions including cold and hot work
 - Electrostatic precautions
 - Use of PPE
- Emergency procedures on board chemical and oil tankers
- Precautions to prevent pollution of the environment
- Legislative requirements concerning chemical and oil tanker cargo operations
- Industry requirements concerning chemical and oil tanker cargo operations

Skills:

- Planning of cargo operations with regards to:
 - Ship arrangement, cargo systems and equipment
 - Ship stability, trim and stress
 - Cargo properties and hazards
 - Application of occupational health and safety and safe working practices including risk assessment and personal shipboard safety relevant for chemical and oil tankers

Syllabus

- Environmental and local legislative requirements
- Industry guidelines
- Perform and monitor cargo operations and react appropriately on failure of systems or services essential to cargo operations
- Cargo measurement and calculations
- Manage and supervise personnel with cargo-related responsibilities
- Calibrate and use gas monitoring and detection systems and equipment
- Responds to emergencies according to MFAG and the SOPEP/SMPEP including ESD, rescue from enclosed spaces and fire fighting
- Take precautions to avoid pollution of the atmosphere and the environment
- Monitor and control compliance with legislative requirements i.e. MARPOL convention, IBC code, other relevant IMO guidelines, industry guidelines and commonly applied port regulations

Competencies:

- Conduct safe chemical and oil tanker cargo operations

Core literature

- SOLAS Convention
- MARPOL Convention
- FSS Code
- IBC Code
- ISGOTT
- Tanker Safety Guide - Chemicals
- CHRIS Manual

Examination

Advanced Training for Oil and Chemical Tanker Cargo Operations (88145):

Examination type:	Ongoing assessment
Grading scale:	Passed or Not Passed
Preparation time:	None
Duration:	N/A
Aids allowed:	N/A
Important Information:	None
Prerequisites for Examination:	None

Qualification prerequisites for professors/instructors etc.

Associate professors, assistant professors or instructors intended to be used in qualifying for certification under the STCW convention of 1978 as amended shall:

- have a qualification level that is higher than the level of learning objectives for the subject and
- have a full understanding of the subject-training programme and the specified objectives for each type of training being conducted.
and in accordance with the Danish order no. 1165 of 3 November 2014, as amended
- have practical experience on board tankers at management level and the instructor shall be
 - Associate professor at a maritime academy with specific theoretical and professional knowledge of chemical and oil tankers and their operations acquired as surplus officer on board a chemical and oil tanker
 - or
 - Senior ships officer with minimum 2 years of experience on board chemical and oil tankers and trained in teaching.
